

Promoting Inclusive Workplace Initiatives for Persons with Disabilities in the Public Sector

Experience and lessons learned from four pilot ministries: Ministry of National Development Planning, Ministry of Administrative and Bureaucratic Reform, Ministry of Home Affairs, and Ministry of Labor.

1 Background and Rationale

1.1 Introduction

There are approximately 17.8 million persons aged 15 and above who have disabilities (Regsosek, Indonesia's integrated, nation-wide socio-economic data system, 2022). Estimates from Sakernas, the National Labour Force Survey (August 2024) show that 36.67% persons with disabilities fall within the formal working-age group (18–59 years old), representing significant untapped potential if barriers to equal employment are addressed. Within this group, 54.8% are women, nearly half reside in Java, and their disability types are diverse: 43% experience visual impairments, 35% lower-body disabilities, and 36% multiple disabilities, alongside hearing (17%), upper-body functional limitations (17%), and communication difficulties (21%). Labour market outcomes reveal persistent inequalities: Prospera's estimates, using Sakernas August 2024, show that labour force participation among persons with disabilities is only 45%, two-thirds of the rate of their counterparts without disabilities (73.2%). Youth workers with disabilities (aged 25–35) are disproportionately concentrated in low-wage or even unpaid jobs as unpaid family workers and casual workers (29%), compared to youth workers without disabilities (19.15%). Even in the same qualifications, workers with disabilities often face a literal pay gap compared to non-disabled peers.

Strengthening disability inclusion is therefore not only a matter of rights and equity, but also a prerequisite for inclusive development. Economically, evidence from six countries¹, including Indonesia, shows that the labour market exclusion of persons with disabilities and related earning gaps can result in estimated GDP losses ranging from 0.73 per cent to 4.36 per cent (Mont et al, 2025). Equal participation would help reduce this loss, contributing to the national target of 5–7% annual GDP growth. From a human capital perspective, employment strengthens social capital by fostering workplace connections and networks. Evidence shows that individuals with disabilities, such as those with visual impairments, report higher levels of social capital when employed. Strengthening such social capital not only supports sustained workforce participation but also boosts productivity and competitiveness. Yet Indonesia currently ranks 42nd in Social Capital, behind ASEAN peers such as Vietnam (19th) and Singapore (21st) (Legatum Prosperity Index, 2023).

The public sector has a critical role in advancing disability inclusion. The public sector provides decent work, job security, and empowerment opportunities that are essential given the context of low participation and often precarious employment. Beyond fairness, the case for disability inclusion is strong: diverse workforces enhance innovation, performance, and well-being, while also improving quality of life, income, and self-confidence for persons with disabilities. In the public sector, diversity builds trust, strengthens democracy, and reflects society's values. Individuals with disabilities bring unique perspectives that foster innovation and inclusive culture, while their representation enhances public confidence by demonstrating a genuine commitment to diversity and inclusion (WEF, 2021; OECD, 2023).

Indonesia has established a strong legal foundation to support this agenda. Law No. 8/2016 on Persons with Disabilities requires government agencies and state-owned enterprises to employ persons with disabilities in at least 2% of their workforce, while the private sector is expected to maintain a 1% quota. Law No. 20/2023 on State Apparatus (*Aparatur Sipil Negara* - ASN) reinforces these principles by mandating non-discrimination, meritocracy, and reasonable accommodation in civil service management. These mandates align with the targets stipulated under the national planning documents. The National Long-Term Development Plan (RPJPN) 2025–2045 targets that 60% of working-age persons with disabilities will be employed in the formal sector by 2045. This target is then translated into the National Medium-Term Development Plan (RPJMN) 2025–2029, which sets a target of 12% of persons with disabilities working in the formal sector by 2029, an increase of 2

¹ The countries include Ethiopia, Indonesia, Malawi, Mexico, Mongolia, and Rwanda.

percentage points from 2025, which is estimated at 10%—or around 425,000 additional formal workers (based on estimates using Regsosek 2022 and Sakernas 2024).

1.2 Rationale for the piloting program

Since 2014, the Government of Indonesia has implemented Special Disability Positions (Formasi Khusus Disabilitas) in civil service recruitment to operationalize the disability employment quota. Allocations increased from 292 positions (0.4%) in 2014 to 2,323 positions (1.8%) in 2021, with substantial improvements in fill rates. Between 2017 and 2024, 6,166 persons with disabilities were recruited into the civil service through this scheme.

However, representation remains below the intended level of inclusion. In 2024, although 1.75% of civil service positions were allocated for persons with disabilities, they accounted for only 0.55% of successful candidates (991 of 178,737) (BKN, 2024). This gap suggests that quota allocation alone is insufficient and that barriers persist within recruitment processes, assessment mechanisms, and institutional readiness. There is also limited evidence on whether ministries are meeting the mandated 2% quota in practice and whether ASN with disabilities can access meaningful work and career progression opportunities.

Prospera's 2024 study, *"Reaching the 2% Employment Target for ASN with Disabilities,"* further indicates that disability inclusion efforts are uneven across institutions. Among 19 surveyed ministries and agencies, only 10 reported having specific inclusive recruitment strategies. ASN with disabilities identified systemic barriers related to accessibility, human resource policies, work culture, and the provision of reasonable accommodation, highlighting the need for stronger institutional systems beyond entry-level recruitment.

In response, Ministry of National Development Planning's Directorate of Poverty Alleviation and Social Welfare (PKKS), with support from Prospera, initiated a piloting program with four ministries—Ministry of National Development Planning (Bappenas), Ministry of Home Affairs (Kemendagri), Ministry of Administrative and Bureaucratic Reform (KemenPANRB), and Ministry of Labor (Kemenaker)—to assess workplace conditions and institutional practices. By examining both organizational systems and lived experiences across six dimensions of a disability-inclusive workplace, the pilot aims to generate practical, context-specific recommendations to strengthen inclusion and expand equitable career pathways within the civil service.

2 Pilot Scope, Design, and Approach

2.1 Framework for inclusive public sector workplace

Building an inclusive public sector workplace requires a holistic approach that goes beyond compliance and addresses both systemic and practical barriers faced by persons with disabilities. It is not only about providing accessible facilities, but also about embedding inclusivity into every aspect of the employee lifecycle and organizational culture. These assessment and pilot initiatives adopt the same framework used in the Prospera's diagnostic study on 'Reaching the 2% Employment Target for ASN with Disabilities' (2024), that covers six key critical components of an inclusive workplace (Figure 1).

Figure 1: Inclusive public sector employment framework

These six aspects form a feedback loop where strong leadership drives inclusive policies such as physical and digital accessibility, workplace adjustments, and human resource policies, and hiring policies, which will support inclusive cultures enabling equitable career development (see table 1).

Table 1: Six aspects for inclusive workplace

Leadership ecosystem covers leadership practices, initiatives, and examples to promote disability inclusion in the agency.

Placement and career development covers strategies for career and capacity development, talent management policies, and career progression mechanisms, including selection for promotion and consultation process, and barriers felt during career progression.

Inclusive work culture covers work practices, expectations, and strategies to make an inclusive working environment and culture.

Recruitment and hiring process covers recruitment strategies and initiatives, the application process for individuals, and challenges in the hiring process.

Workplace adjustment and HR policies cover working arrangements and policies targeted for ASN with disabilities.

Physical and digital accessibility cover the availability of inclusive and accommodating infrastructure and facilities in the workplace.

Source: Adopted from frameworks on inclusive workplace (EARN, 2024; HI, 2024)

To achieve an inclusive workplace through these six aspects, it is crucial for the institution to adopt the FAIR framework: Fairness, Access, Inclusive, and Representation. In the FAIR framework, fairness is defined as everyone is set up to succeed and protected against discrimination, access is when everyone can fully participate in an experience or environment, inclusion is when everyone feels respected, valued, and safe for being who they are, and lastly, representation is defined as when everyone trusts their representatives to act with their

needs in mind.² The FAIR framework should be embedded in each of the six aspects, ensuring that all aspects are fair, accessible, inclusive, and representative of persons with disabilities.

2.2 International benchmarking on inclusive workplace initiatives

International experiences demonstrate that disability-inclusive public sector workplaces can be strengthened through practical, institutional mechanisms—particularly those that normalize flexibility, support career progression, and ensure timely accommodations. Several countries have adopted structured approaches that can inform Indonesia’s efforts, including flexible work policies (Australia and the Philippines), systematic employment and career support for persons with disabilities (Malaysia), and standardized accommodation tools to improve workplace accessibility (Canada). These practices highlight the importance of embedding inclusion into everyday HR systems and workplace procedures.

Table 2: Peer countries’ initiative for inclusive workplace

 Australia	Aligning with the Disability Discrimination Act 1992, the APS tracks disability through two distinct channels: identifiable HR records for specific adjustments and the anonymous Employee Census for broader trends. This dual approach protects privacy while highlighting the ‘disclosure gap’ in the annual State of the Service Report. This serves as the benchmark for the 7% employment target in the public sector.
 Philippines	Philippines has flexible working arrangements in the public sector consisting of flexiplace (flexible working place), compressed work week, work shifts, and flexitime (flexible working time).
 Malaysia	Malaysia has a systematic support in the public sector for job placement, coaching, and career development for persons with disabilities.
 Canada	The Canadian Government offers a Workplace Accessibility Passport to promote accessibility and inclusivity for persons with disabilities in the public sector by helping them articulate their needs and ensuring appropriate accommodations to support success in the workplace.

Source: Prospera (2024)

In addition to these examples, Figure 3 presents the ‘IncludeAbility Guide’ developed by the Australian Human Rights Commissioner as a practical reference for advancing disability-inclusive workplaces. The guide provides a structured framework to assess and improve inclusion across key dimensions of the work environment. It covers physical accessibility (including the application of universal design principles), workplace attitudes and culture, equitable access to technology, and the provision of reasonable accommodations.

² FAIR framework, <https://www.lilyzheng.co/fair-framework>. Accessed 12 February 2026.

Figure 2: Australian Human Rights Commissioner ‘IncludeAbility Guide’

Australian Human Rights Commissioner ‘Include Ability Guide’

‘Include Ability’ is an initiative aimed to improve workplace inclusivity for persons with disabilities. This initiative covers various aspects in the workplace such as:

- **Physical accommodation**
Ensure the application of ‘universal design’ principles. The assessment covers accessibility both for the general public and within internal environments.
- **Attitude and work culture**
Assessing the attitude of others in the workplace such as supervisors and colleagues towards persons with disabilities.
- **Technology**
Ensuring equitable access to technology in the workplace for all employees, enabling them to be empowered and perform their work efficiently.
- **Reasonable accommodation**
Providing adjustments to practices, processes, or the work environment to ensure employees can perform their duties without barriers.

2.3 Objective and Approach

2.3.1 Objective

Built upon the Prospera’s study, ‘Reaching the 2% Employment Target for ASN with Disabilities’ (2024), this activity aims to support ministries/agencies in assessing their current level of workplace inclusion and introducing practical initiatives to promote inclusive workplaces and advance achievement of the 2% disability quota. It will encourage ministries/agencies to adopt disability-inclusive policies and implement concrete internal measures, covering recruitment and selection processes, retention, and career development of ASN with disabilities, while strengthening institutional capacity for inclusive policy development and planning. In the longer term, the activity seeks to strengthen institutional-level commitment to disability inclusion, integrate workplace disability inclusion into the national agenda, and mainstream disability-inclusive policymaking across the public sector.

2.3.2 Approach

The initiative adopted a two-stage approach to strengthen disability-inclusive workplaces within the public sector. First, a diagnostic and feasibility assessment was conducted to establish baseline conditions, identify institutional barriers, and assess readiness for implementation. Second, based on the findings, a pilot phase was implemented to test practical and scalable initiatives that respond to the needs and gaps identified during the diagnostic. Together, these two components ensured that the pilot interventions were evidence-based, context-specific, and oriented toward institutionalization and scale-up.

a. Selection of participating ministries

The four participating ministries were selected purposely to ensure the pilot’s impact and its potential for scale-up. Bappenas, as the overall coordinator, is expected to first strengthen inclusivity within the institution and then mainstream these practices into broader planning and policymaking processes, ensuring that inclusion is embedded in government systems rather than remaining a stand-alone initiative.

Kemendagri was selected due to its strategic role in guiding, supervising, and coordinating subnational governance. Beyond internal implementation, the pilot is expected to generate practical lessons that can be replicated by provincial and district governments, enabling inclusive practices to cascade to the local level.

KemenPANRB was included because of its leadership in bureaucratic reform and civil service management. The ministry is well positioned to translate the pilot's good practices into institutional reforms and national-level policies on civil service governance, strengthening sustainability and system-wide adoption.

Kemenaker was selected given its central role in shaping employment policy and workplace practices. Through this pilot, Kemenaker is expected to demonstrate inclusive workplace implementation in practice—serving as a reference point for the private sector in advancing decent work opportunities for persons with disabilities.

b. Diagnostic and feasibility assessment

The diagnostic component focuses on identifying institutional-level gaps in creating an inclusive workplace for ASN, including ASN with disabilities. The assessment is conducted through: (i) desk research on relevant literature and regulations; (ii) focus group discussions (FGDs) with key stakeholders, including relevant internal management units and ASN with disabilities; (iii) an accessibility assessment; and (iv) data collection on ASN with disabilities. Together, these activities provide the evidence base to determine the scope and priorities of the pilot phase.

Focus group discussions (FGD): A series of FGD were conducted to assess the institutional landscape of disability inclusion, identify key needs, and inform the selection of pilot initiatives. As an initial step, the FGDs aimed to capture the current workplace conditions and experiences within each participating ministry. Several FGDs were held between June and July 2025 with the Human Resources Bureau, General Affairs Bureau, and other relevant units to discuss existing practices, workplace environments, and efforts to promote inclusive workplaces. In addition, separate FGDs were conducted with ASN with disabilities in each ministry, independent from HR and General Affairs discussions, to minimize bias and ensure participants could share their experiences, challenges, and perspectives openly. Findings across FGDs were then cross validated to identify consistent patterns and key differences, strengthening the analysis and informing the design of targeted interventions.

Accessibility assessment: The accessibility assessment applies a technical checklist based on field observations, basic measurements, and visual documentation of key areas, such as access routes, entrances, ramps, elevators, internal circulation, accessible toilets, parking, signage, and information systems, to assess both availability and compliance with Ministry of Public Works and Housing (PUPR) standards (e.g., path width, ramp slope, door width, elevator features, and toilet manoeuvring space). Using an instrument developed by Bappenas' PKKS Directorate with technical support from the Prospera team (see Annex 1), each aspect is scored and reported based on the average availability of compliant facilities (100 = fully available across routes/floors; 0 = not available). Findings, supported by qualitative notes and documentation of actual conditions, provide a foundation for prioritizing infrastructure improvements aligned with accessibility standards and universal design principles.

Table 3: Components of the Instrument

Component	Description
Assessment Method	Technical checklist based on direct observation.
Scoring Approach	Qualitative assessment based on the level of availability and compliance with standards.
Scoring Range Types	4-Level Range: All – Mostly – Partially – Not Available. 5-Level Range: Fully Compliant – Mostly – Partially – Exists but Non-Compliant – Not Available. Binary Range: Yes/No or Present/Absent.
Assessment Aspects	• Building Access Routes: Pedestrian paths, guiding blocks (tactile paving), ramps, road surfaces. • Doors & Entrances: Door width, thresholds, automatic vs. manual doors.

Component	Description
	• Internal Circulation: Elevators, inter-floor ramps, stairs, indoor corridors, lighting & ventilation. • Accessible Toilets: Maneuvering space, grab bars, emergency alarms, low urinals. • Supporting Facilities: Accessible signage, workstations, public services, communication materials, audio-visual systems.
Accessibility Standards	• Path Width: ≥ 120 cm. • Guiding Blocks: Must be unobstructed. • Ramp Slope: ≤ 1:10 (outdoor), ≤ 1:8 (indoor). • Door Width: Minimum 90 cm. • Door Threshold: ≤ 1.25 cm. • Elevator Features: Panel height 90–120 cm, Braille, audio, and visual indicators. • Accessible Toilet: Maneuvering space diameter ≥ 150 cm and equipped with grab bars.

Source: Adapted from Ministry of Public Works Regulation No. 30/PRT/M/2006 on Technical Guidelines for Facilities and Accessibility in Buildings and Environments and Ministry of Public Works and Housing (PUPR) Regulation No. 14 of 2017 on Building Ease of Access Requirements.

Data collection on ASN with disabilities: To collect data on ASN with disabilities, the assessment uses the Washington Group Short Set. The Washington Group is an internationally recognized set of questions developed under the United Nations Statistical Commission that focuses on functional limitations rather than medical diagnoses. By capturing the level of difficulty experienced in universal activities, such as walking, seeing, hearing, and cognition, the tool enables consistent and comparable data across contexts. The Washington Group approach has also been applied by BPS and Bappenas in national surveys, including the Labour Force Survey (Sakernas), the National Socio-economic Survey (Susenas), and the Socio-economic Registration (Regsosek).

c. Pilot implementation

The pilot program was implemented over a six -month period across four ministries under the coordination of Bappenas' Directorate for Poverty Alleviation and Social Welfare (PKKS). Implementation was carried out jointly by Prospera, with technical direction and oversight from the PKKS Directorate.

Within each participating ministry, the Human Resources Bureau and the General Affairs Bureau served as the primary counterparts and focal points, leading the coordination of assessment activities and the delivery of pilot interventions. Throughout the implementation period, coordination was maintained through regular virtual communications, structured meetings, and field-based engagements.

3 Situational Analysis of Disability Inclusion in the Workplace Across Ministries

Across the four ministries, initial progress has been made in recruiting civil servants with disabilities, but institutional systems remain underdeveloped. Data tracking, internal regulations, and inclusive HR practices are largely ad hoc, while accessibility gaps persist in physical infrastructure, digital systems, and supporting facilities. Although many ASN with disabilities report supportive colleagues and leadership, they continue to face cultural barriers, limited career development support, and inconsistent implementation of flexible work arrangements. Overall, formal commitments exist, but systemic reforms are still needed to translate them into sustainable and inclusive workplace practices.

3.1 National Development Planning Agency (Bappenas)

Table 4: Snapshot of Bappenas

Bappenas is responsible for national development planning and resource allocation, including setting macroeconomic frameworks, development priorities, financing strategies, and coordinating policies, budgets, and stakeholders to achieve sustainable national and global objectives.		
	Bappenas employs approximately 2583 ASN (including PNS, PPPK, and CPNS)	Bappenas reports directly to the President of the Republic of Indonesia

Bappenas has only recently begun to recruit ASN with disabilities. In 2024, 11 new civil servant candidates (CPNS) with disabilities were accepted, in addition to three contract staff and two identified employees who became disabled during service (e.g., due to stroke or vision impairment). Disabilities represented include low vision, physical impairments requiring wheelchairs, hearing impairments, and psychosocial conditions.

Despite this milestone, the institution still lacks a formal SOP on disability inclusion. Bappenas' HR department (Biro SDM) stated they did not yet have a system to track the distribution of ASN with disabilities by type of disability (partly because this was the first official CPNS intake) and still relied on unit-level reporting. They also mentioned cases where employees acquired disabilities due to illness or accidents and then received accommodations. There had been no additional internal assessment or survey focused on facilities for staff with disabilities. From the CPNS perspective, there was no formal mechanism to submit complaints or requests (currently handled informally via a WhatsApp group), and a dedicated discussion forum was proposed. One experience shared by a staff member with a visual disability highlighted that supportive colleagues and supervisors made work feasible. Independent mobility improved after initial assistance, and technology (including AI) could help with reading documents, though understanding substantive content still required collaboration. ASN with disabilities noted that colleagues and supervisors are generally supportive, but there is no structured feedback mechanism. However, many are reluctant to raise their needs, fearing stigma or being perceived as less capable. Flexible working arrangements, although legally mandated, are not systematically available.

During the focus group discussion, Bappenas' Human Resources Bureau emphasized that,

This is the first time the HR bureau accepted CPNS with disabilities. Bappenas currently does not have accommodative measures especially after moving from the old building to Menara Bappenas. We continue to observe and identify their needs through asking them individually to ensure Bappenas fully supports them,— Representatives of Bappenas HR Bureau.

ASN with disabilities face significant social and interpersonal challenges, shown by an 'exclusion' or 'separation' during informal interactions (like lunch break) and a general interaction anxiety from colleagues who feel awkward or hesitant to communicate or delegate tasks. This might lead to lack of meaningful interaction between ASN with disabilities and leaders-colleagues to grow their full potentials. This gap is worsened by communication and information misunderstanding, where deaf members of staff miss critical details in fast-paced meetings or when hygiene masks prevent lip-reading (especially during pandemics). Lack of essential visual and audio aids during meetings or presentations also affects ASN with disabilities in navigating daily work life, for example real-time transcribers or audio lift announcements.

Helpfulness from their colleagues is appreciated, although lack of disability awareness means that they do not respect the agency of ASN with disabilities. Although some ASN with disabilities expressed security and that colleagues are helpful, they find their colleagues' helpfulness a bit overbearing. When support is offered without being requested—such as being helped out of a vehicle—they may feel uncomfortable declining it, even when they do not need assistance.

Understanding psychological and mental health challenges among ASN with disabilities is essential to identify support they need. Neurodivergent staff expressed they need quiet zones and workload adjustments during manic and depressive phases. However, this awareness between supervisor, colleague, and ASN with disabilities needs to be built with trust and openness, due to the stigma and social norm placed on them. Fear of being stigmatized as less productive for requesting support might lead to mismatch in tasking and skillset that ASN with disabilities has. ASN with disabilities also expressed that they lack validation from their supervisor and peers on their work performance, which can be caused by lack of open communication between them. Inclusive leadership might also include more space to that feedback is communicated properly, with room for growth and improvement plan (from ASN with disabilities themselves and potential external supports).

ASN with disabilities expressed their challenges in technological and digital aspects, as office laptops and digital documents remain incompatible with screen reader applications, and (agencies') websites often lack accessibility features like font and contrast adjustments.

In terms of physical accessibility, Bappenas' offices (*Menara Bappenas* and *Taman Suropati*) show some good starting points. *Menara Bappenas* has a dedicated disability toilet (separate from general toilets), and *Taman Suropati* provides several ramps from the entrance into the ground-floor areas. Both also have generally level office floors that support horizontal wheelchair movement. However, major gaps remain on pedestrian access to entrances, the lack of guiding blocks, ramps that are too steep or slippery, the absence of an accessible toilet at *Taman Suropati*, and very limited accessible signage and sensory information systems (audio/visual).

By aspect, the weakest area in both buildings is the external access route to the building. In both locations, pedestrian routes are not fully compliant with minimum width standards and are not equipped with continuous guiding blocks. Accessible parking is also not available. In terms of building entrances, *Taman Suropati*'s north-side corridor is relatively supportive, but *Menara Bappenas* still relies on steps and has a ramp that is too steep/slippery and lacks proper handrails. Inside the buildings, *Taman Suropati* has uneven level changes and ramps that exceed recommended slopes and have slippery surfaces. Although lifts do exist (up to level 4) and include braille buttons, at least one lift cabin is not wide enough for safe wheelchair use. *Menara Bappenas* is relatively accessible regarding inside mobility, but the building's 20 floors make staff highly dependent on lifts with limited accessibility (incomplete braille, limited audio announcements, weak visual indicators). In addition, long waiting times can be a major barrier for staff with mobility constraints.

Toilets are a critical gap in services for workers with disabilities. There is no dedicated accessible toilet in *Taman Suropati*, while *Menara Bappenas* has accessible toilets on the ground floor, but it still falls short (insufficient manoeuvring space, no emergency alarm, door width issues, grab bars not to standard, and 'smart toilet' controls without braille). Supporting facilities such as accessible signage, low counters at public service points, and inclusive audio-visual warning systems are still limited in both buildings, if not absent.

Table 5: Table of Accessibility Assessment in Bappenas

	Taman Suropati Building	Menara Bappenas Building
Access Routes to the Building	17/100	22/100
Doors and Entrances	70/100	65/100
Internal Building Access	40/100	60/100
Accessible Toilets	0/100	17/100
Supporting Facilities	33/100	33/100

Legend: ■ 80-100: Accessible, ■ 60 - 79: Quite Accessible, ■ 40 - 59: Not accessible, ■ < 40: Very not accessible

3.2 Ministry of Home Affairs (Kemendagri)

Table 6: Snapshot of Kemendagri

Kemendagri administers domestic governance affairs to support the President in carrying out the administration of the state. Its functions include formulating and implementing policies on domestic governance, regional autonomy, local government and village administration, regional finance, and civil registration, as well as providing technical guidance, supervision, coordination, capacity development, and oversight of central–local government administration in accordance with prevailing laws and regulations.	
 Kemendagri employs approximately 6774 ASN (including PNS, PPPK, and CPNS)	Kemendagri reports to the Coordinating Ministry of Political and Security Affairs

Kemendagri reports around 15 ASN with disabilities, most of whom are in the headquarters office, while others are placed in various directorates. Disabilities represented include physical, sensory, and psychosocial conditions. Several employees have served for more than a decade.

However, Kemendagri currently does not have a formal mechanism for identifying ASN with disabilities. Constraints related to budget and staffing within the Human Resources Bureau further complicate the process. One member of the Bureau highlighted ethical concerns and the complexities of classification criteria in identifying disabilities, emphasizing the need for psychology graduates to support proper categorization. Some staff noted that ASN with disabilities may be hesitant to disclose their status, while others pointed out that sharing information about their disabilities or specific needs could be perceived as a sign of incompetence and potentially affect job placement and career advancement.

ASN with disabilities reported that while recruitment has become more inclusive since 2019, support for career development is limited. Counselling weeks and annual engagement surveys exist, but they do not adequately capture disability-specific needs. Employees also noted challenges in communication, with hearing-impaired staff struggling in meetings due to lack of interpreters. The Bureau is currently considering programs outside the office, such as basketball and volleyball clubs, to promote inclusivity. However, this program needs to be evaluated in solving the main issue faced by ASN with disabilities.

Although Kemendagri has established regulations supporting flexible working arrangements, implementation has not yet occurred. This is largely due to a workplace culture that prioritizes physical presence over work output, which disproportionately impacts ASN with disabilities who require flexibility. Performance evaluations remain focused on attendance rather than results. Some staff have noted that successful adoption of flexible work practices also depends on employees maintaining responsiveness while working remotely.

A significant gap identified is the lack of disability awareness training for all staff. Employees without disability expressed feeling awkward and uncertain when attempting to assist colleagues with disabilities. ASN with disabilities also emphasized the importance of leadership involvement in the success of disability awareness training, noting that such programs have typically only been attended by staff and operational personnel rather than management. Kemendagri offers mental health webinars and hybrid counselling internally, but there is room for improvement in having a structured mentoring or career development support for persons with disabilities.

During the focus group discussion, Kemendagri's Organization and Governance Bureau claimed: *Kemendagri focuses on providing the best public services to users and ensures everyone that comes to Kemendagri be treated right, however internally there is still a lack of accessibility and inclusivity towards our ASN with disabilities.* – Representatives of Kemendagri Organization and Governance Bureau.

The Ministry has invested more in inclusive public service delivery than in workplace adjustments. Accessibility improvements, such as tactile paving, ramps, and inclusive applications for public facilities (the Siola platform and *Unit Layanan Administrasi/ULA* upgrade), are in place, but mostly aimed at public users rather than staff. Some Kemendagri websites remain inaccessible. Permendagri No. 1/2025 provides an administrative framework for inclusive service delivery, yet there is no equivalent internal regulation for civil servant.

Table 7: Accessibility Assessment in Kemendagri

	Score
Access Routes to the Building	56/100
Doors and Entrances	72/100
Internal Building Access	65/100
Accessible Toilets	6/100
Supporting Facilities	27/100

3.3 Ministry of Administrative and Bureaucratic Reform (KemenPANRB)

Table 8: Snapshot of KemenPANRB

KemenPANRB is tasked with managing state apparatus utilization and bureaucratic reform to support the President in the administration of government. Its functions include formulating, coordinating, and overseeing policies on bureaucratic reform, institutional and governance arrangements, civil service human resources, accountability and supervision, public service delivery, and providing administrative support within the Ministry.	
 KemenPANRB employs 909 ASN (including PNS, PPPK, and CPNS)	KemenPANRB reports directly to the President of the Republic of Indonesia

KemenPANRB, the ministry overseeing civil service reform, has one of the smallest shares of ASN with disabilities. Only two staff were recruited through quota in 2020 and four who

became disabled later due to illness. With a total workforce of 700–800, this represents less than 1%.

The recruitment through the disability quota has been unsuccessful, with positions unfilled due to burdensome requirements such as medical certificates, video submissions, and lack of outreach. HR officers acknowledged that awareness is improving, but systemic barriers remain. The job search system lacks a dedicated disability filter, and one employee shared their concerns on the inconsistency in understanding and implementing the 2% quota across ministries. Additionally, budget allocations for capacity building are insufficient, and these challenges have been discussed with the Ministry of Social Affairs (Kemensos).

There is currently no integrated digital system to track employees who become disabled after hiring. Changes in disability status are managed manually through reports from individual units to the Human Resources Bureau, which are then referred to relevant services or clinics. Reports may be submitted formally (via official memorandum, ‘Nota Dinas’) or informally. The Human Resources Bureau allocates sufficient personnel to visit employees with specific disabilities (such as stroke or injury, ‘cedera’). Although some services or clinics (‘klinik’) receive reports from various units, they only categorize cases by severity (mild or severe injury, ‘cedera ringan’ or ‘cedera berat’) and do not have the authority to officially change an employee’s status to ‘disabled.’ These services maintain lists of employees’ names and specific needs, but this data is not yet integrated with the Ministry’s employee records. Data on ASN with disabilities is also not incorporated into the Ministry’s broader HR systems, highlighting opportunities for improved data management and privacy protection, especially given concerns about stigma.

The Ministry provides support through services such as routine follow-ups and home visits by Klinik Pratama KemenPANRB for employees who become disabled due to illness. While mental health webinars and hybrid counselling are available, there is currently no structured mentoring or career advancement support for persons with disabilities. Access to health services is also facilitated via telephone, benefiting employees with mobility limitations.

Leadership within KemenPANRB is recognized for its supportive and accommodating approach, as evidenced by direct communication and flexibility, such as permitting staff with disabilities to participate in the Asian Paralympic Games. The introduction of Flexible Working Arrangements (FWA) under PermenPANRB 4/2025 is a significant step, enabling ASN with disabilities or health conditions to work from home with managerial approval. However, there remains a critical need for comprehensive disability awareness training across all staff levels, particularly within Biro SDM, to foster an inclusive workplace. Practical examples, such as security staff readily assisting employees with mobility challenges, underscore the importance of organization-wide disability sensitivity training.

During the focus group discussion, KemenPANRB’s General Affairs Bureau emphasized that,

The key to change is raising awareness. With better awareness, those at leadership level will fulfil the needs of ASN with disabilities. They (leaders) will also be able to provide the budget for more accessible buildings. — Representatives of KemenPANRB’s General Affairs Bureau.

Accessibility within ministry facilities is partial. Ramps and accessible toilets exist in some areas but not universally. The limited size of the current office makes it difficult to add ideal facilities like quiet rooms or expanded child-friendly areas. Not all floors have accessible toilets, and existing facilities are often inadequate for wheelchair users.

Table 9: Accessibility Assessment in KemenPANRB

	Score
Access Routes to the Building	39/100
Doors and Entrances	65/100
Internal Building Access	52/100
Accessible Toilets	28/100
Supporting Facilities	57/100

Legend: ■ 80-100: Accessible, ■ 60 - 79: Quite Accessible, ■ 40 - 59: Not accessible, ■ < 40: Very not accessible

3.4 Ministry of Labor (Kemenaker)

Table 10: Snapshot of Kemenaker

Kemenaker is responsible for administering government affairs in the field of employment to support the President in carrying out state governance. Its functions include formulating and implementing policies to enhance workforce competitiveness, productivity, job placement and employment opportunities, industrial relations and social security, occupational safety and health, as well as providing coordination, supervision, technical guidance, and research and development at the national and subnational levels.	
 Kemenaker employs approximately 5067 ASN (including PNS, PPPK, and CPNS)	Kemenaker reports to the Coordinating Ministry of Economic Affairs

Kemenaker employs approximately 14 staff with disabilities across PNS, PPPK, and non-ASN categories. Although there is not yet a clear mechanism for data tracking, current data is managed manually by each unit. A member from *Direktorat Bina Penempatan Tenaga Kerja Khusus* reported five ASN with disabilities in their unit, and nine in other directorates. Disabilities represented include physical, hearing, and low vision impairment. Consultations indicate that the disability status may be underreported, as some employees are reluctant to disclose their condition.

Kemenaker began specifically opening positions (*Formasi Khusus Disabilitas*) for ASN with disabilities in 2018; however, in some years, including 2025, no applications were received for these disability-designated positions. Implementation of this regulation of Formasi Khusus Disabilitas varies and depends largely on decisions of Echelon 1 officials and of KemenPANRB, particularly regarding whether opening disability positions is mandatory.

There is currently no specific capacity-building program tailored for ASN with disabilities, and their HR data system does not record disability status. While Kemenaker stipulates that 1% of workers in companies must be persons with disabilities, this requirement does not apply internally within the Ministry.

Kemenaker provides routine psychological counselling every six months for their staff. The ministry has allocated approximately IDR600 million for mental health services, which includes preventive measure for mental disabilities and counselling for high-level officials experiencing work-related stress. Competency-based training is accessible to ASN with disabilities through Vocational Training Centres. Although the training is not exclusively for persons with disabilities, nine ASN with disabilities participated.

Regarding workplace culture, ASN with disabilities have expressed their appreciation and satisfaction in the improvement of inclusivity, especially in physical accessibility. A participatory approach was adopted, involving employees in accessibility assessments during

building renovations. Employees also appreciate the ministry's responsiveness in addressing physical accessibility needs, such as making ramps more secure, despite some material remaining slippery.

However, a lack of awareness and sensitivity towards ASN with disabilities persists, leading to mismatches between skillset and task assignments. ASN with disabilities hope to be placed in disability-related sector, enabling policies and decisions to reflect their experiences and needs. Awareness training is considered necessary, particularly to foster social interaction between employees with and without disabilities. Regulation and guidance are needed to institutionalize these practices, rather than leaving them as isolated initiatives within units or divisions.

Consultations find the internal environment generally positive, both by employees with and without disabilities. ASN with disabilities expressed that while infrastructure has improved, cultural barriers remain, with some colleagues unaware of how to interact respectfully. Leadership is perceived as caring and employees report no differential treatment. However, ASN with disabilities have not yet been able to self-advocate in public settings unless specifically prompted, indicating a need for a more open and safer environment. Establishing a focal point or person-in-charge for disability management is seen as important for advocacy. Further mechanisms are needed to prevent underreporting of discrimination. Although one staff with a disability reported no discrimination within their unit, they experienced stigma from a colleague in a different unit, highlighting that awareness is not uniform across all units. Feedback channels are underused but have potentials in needs assessment, especially from the perspective of ASN with disabilities.

During the focus group discussion, Kemenaker's General Affairs Bureau emphasized that:

Guiding blocks, accessible toilets, and other accessible facilities have been added gradually since 2015. More ASN with disabilities have been accepted recently and we are trying are best to provide the best facilities for them'— Representatives of Keme

ASN with disabilities hope to get additional benefit to compensate for expenses related to their specific needs, as they currently receive the same benefit as other staffs. Access to medical check-up and sensitivity awareness training are essential. Supports in commuting should also be identified to ensure a disability-inclusive approach across all aspects of employment.

Accessibility investments began earlier than in other ministries, with guiding blocks, accessible toilets, and ramps introduced since 2015. According to an accessibility assessment, Kemenaker's buildings have basic foundations for inclusion but do not meet several national standards. Many existing ramps are too steep, have slippery surfaces, and lack handrails. The main ramp in one building is structurally difficult for wheelchair users. There is lack of braille signs, universal icons, and visual alarms for deaf employees. Infrastructure budgets are currently limited by efficiency measures, and the ministry's building are old, making modification difficult.

Table 11: Accessibility Assessment in Kemenaker

4 Implementation of Pilot Activities

Building on the series of focus group discussions and consultations that established baseline conditions and informed the selection of general and ministry-specific interventions, the pilot phase focused on implementing agreed initiatives and documenting lessons learned. The pilot implementation was carried out over four months, from August to December 2025, within the broader six-month pilot program period.

4.1 Chosen Pilot Interventions

Pilot interventions were designed based on focus group discussions with relevant units in each ministry, complemented by consultations with ASN with disabilities. The interventions consisted of (i) general interventions implemented across all four ministries to establish a common baseline for workplace inclusion, and (ii) ministry-specific interventions tailored to each ministry's needs.

Table 12: Interventions for each Ministry

General Interventions	Infrastructure and Facilities Assessment
	Awareness Training
	Tracking System for ASN with Disabilities
Specific Interventions	Bappenas: Feedback Channel and Sunflower Lanyard
	KemenPANRB: Visual Education and Flexible Working Arrangements (FWA) for ASN with Disabilities
	Kemenaker: Feedback Channel and Portable Ramp
	Kemendagri: Counselling for ASN with Disabilities and Appointing Disability Champion

The general interventions, comprising infrastructure and facilities assessment, disability awareness training, and a system to track ASN with disabilities were selected to generate baseline evidence, strengthen internal capacity, and support more responsive workplace practices. In addition to this, each ministry also implemented two tailored initiatives aligned with their respective contexts and priorities.

Bappenas established a feedback channel for ASN with disabilities and introduced a sunflower lanyard to support identification of hidden disabilities. KemenPANRB developed visual education materials and introduced flexible working arrangements (FWA) as reasonable accommodations. Kemenaker established a feedback channel and provided a portable ramp to address accessibility constraints. Kemendagri implemented counselling support for ASN with disabilities and appointed a disability champion to advocate for inclusion and institutionalize inclusive practices.

These pilot activities serve as a stepping stone to a sustainable, inclusive ecosystem that requires a phased approach to transition into a long-term institutionalization. Building on the baseline evidence, based on these pilot activities, the suggested pathways to develop an inclusive workplace environment are structured into short, medium, and long-term plans.

The suggested pathway is categorized into six aspects of the framework for inclusive public sector workplace (see Figure 4): leadership ecosystem, physical and digital infrastructure, workplace adjustment and HR policy, talent recruitment, work culture, and career development.

In the short-term (2025–26) supported by Prospera, the focus is on operationalizing initial reforms within the four selected ministries by addressing urgent accessibility gaps and

establishing basic administrative mechanisms. This phase translates the pilot lessons into structured, ministry-level implementation. Key actions include:

- **Infrastructure:** Conducting comprehensive accessibility audits of physical workspaces and digital environments, followed by the immediate implementation of ‘quick-win’ results (for example, the installation of portable ramps in Kemenaker).
- **HR policy:** Identifying the support needs through sunflower lanyards, initiating the flexible work arrangements, and the establishment of feedback channels.
- **Talent recruitment** (particularly in **data management**): Establishing tracking mechanisms within the SIMPEG (Personnel Management Information System/*Sistem Informasi Kepegawaian*).
- **Leadership ecosystem:** Appointing ‘disability champions’ to act as the primary advocates for inclusive policies within their respective agencies.
- **Work culture:** disability awareness training and education to leaders and the HR Unit, with impact evaluation using pre- and post-tests.
- **Career advancement:** Counselling sessions on career development for employees with a disability.

Beyond these short-term actions, the assessment also includes medium- and long-term term recommendations, which will be further elaborated in the policy recommendation section. This will include how future action can be anchored in both national and institutional level regulations and policies. In the medium term the effort can be centered on integrating inclusion into standard procedures through universal design for new digital platforms or office renovations, embedding inclusion in the senior officials training, CPNS onboarding, and implementation of inclusive recruitment. In the long term, the focus is to scale up, harmonize inclusive HR policies, strengthen career advancement pathways (including fast-track leadership and cadre-building for ASN with disabilities), and integrate of disability-related personnel data with BKN to enable evidence-based monitoring of inclusion outcomes nationally.

4.2 National Development Planning Agency (Bappenas)

4.2.1 General interventions

The accessibility assessment was held on 14 October 2025. The assessment was conducted in two places: Bappenas’ Taman Suropati building and Menara Bappenas in Kuningan, guided by the instrument as stated above in chapter 2 (see Annex 2 for instrument). The assessment was conducted effectively, with active support and participation from Bappenas’ General Affairs Bureau and a representative of their ASN with disabilities with physical impairment, explaining the different aspects of the building.

The assessment reflected an area that Bappenas had previously considered, and this pilot phase made it into a clear institutional priority. Because of this assessment, Bappenas ensures that its long-term building masterplan should be inclusive and disability friendly. However, due to budget constraints, future planning and development will prioritize renovations in the Taman Suropati Building due to its current limited accessible infrastructure and focusing on improving accessible toilets and clear pathways from the main gate towards key meeting areas. It has also been incorporated into the planning process that portable ramps and handrails may be an option for quick fixes, when needed.

The awareness training for Bappenas have also been conducted on 17 November 2025 in the Bappenas’ *Taman Suropati* office. A total of 36 participants, including 6 Echelon 2 were in attendance at the training. The awareness training was facilitated by the Inclusion Centre and Advocacy Movement for the Disabled (SIGAB). A key component of the training was the

administration of pre- and post-training assessments to evaluate participants' learning outcomes and assess the effectiveness of the training.

The training was divided into four sections: Indonesia's current situation of persons with a disability, understanding the concept of disability and disability inclusion, achieving an inclusive and accessible workplace, and learning the etiquette for interacting with persons with disabilities. Bappenas' Human Resources Bureau emphasized that the awareness training generated various requests from individuals seeking to further deepen their understanding of how to implement an inclusive workplace. One of the notable requests raised by several participants was to have a follow-up training on sign language. Understanding sign language may become the first step in better understanding the needs of ASN with disabilities, specifically those with hearing impairments. The request has been taken into consideration by the HR Bureau and planned to be executed this year. The HR Bureau have also identified that participants of the sign language training must include representatives from each directorate within Bappenas to ensure equal participation and shared institutional understanding.

Our pre- and post-test results for disability awareness training shows significant improvement. From 26 participants who have taken the pre and post-test, more than half of them have improved knowledge on basic concepts of disability in Indonesia. In addition, around 26% of them have already grasped the basic concepts even before the training started. This highlights the effectiveness of the training materials in levelling the playing field, ensuring that all participants, regardless of their starting point, now share a consistent standard of understanding regarding disability in Indonesia.

Table 13: Pre- and post-test results of the awareness training - Bappenas

Description	Number of respondents	Percentage
Already knowledgeable from start	6	26.09%
Improved	13	56.52%
Stagnant/lower	4	17.39%

The final general intervention is the ASN data tracking survey. The survey was launched through a Survey Monkey link by the Human Resources Bureau in early November and was estimated to be finished by 30 November. However, only 452 out of approximately 2583 ASN (PNS, CPNS, and PPPK) have finished the survey to date, showing only a 23% response rate. The HR Bureau have attempted to increase the response rate and closed the survey on 23 January 2026.

Reflection from the Human Resources Bureau

Based on the insights we collected from the Human Resources Bureau, this response rate is consistent with existing internal engagement patterns, reflecting historically low participation in past internal surveys.

Collecting survey respondents remains to be an issue for Bappenas. Even in our internal surveys, response rates are relatively low and do not achieve maximum participation.—
Representatives from Bappenas HR Bureau

The survey result suggests that among 452 respondents, 47 of them have at least one form of moderate or severe difficulty, representing an overall prevalence rate of 10.4%. If we disaggregate by form, non-physical difficulties appear to be the primary drivers, with cognition (4.9%) and emotion (4.0%) recording the highest percentages. In comparison, sensory and mobility issues are less frequent; vision and hearing difficulties stand at 2.2% and 1.8%

respectively, while upper mobility issues were not reported at all (0.0%). However, the data has not been verified, and Bappenas' HR Unit might need further clarification for the data.

Table 14: Types of Disabilities Among Survey Respondents - Bappenas

ASN with moderate/severe difficulties	10.4%
Moderate/severe difficulties by forms	
Vision	2.2%
Hearing	1.8%
Lower mobility	1.3%
Upper mobility	0.0%
Cognition	4.9%
Emotion	4.0%
Communication	0.2%
Self-care	0.4%

4.2.2 Specific Interventions

Bappenas has also chosen two specific interventions that they feel may become a quick win to develop an inclusive workplace in Bappenas. The first intervention that was conducted was the development of a feedback channel that focuses on obtaining direct feedback from ASN with disabilities or from those without disabilities, to ensure there are equal opportunities and no discrimination for persons with disabilities. The feedback channel is currently in the process of being integrated by the HR Bureau into the SiStranas, Bappenas' personnel system, to ensure ease of access for those that wish to provide feedback to the HR Bureau. The feedback channel during the pilot phase took longer than anticipated, reflecting ongoing efforts by leadership and the HR bureau exploring the most effective approach to encourage active participation of the feedback channel itself.

The second intervention chosen by Bappenas is the sunflower lanyard. As described in Chapter 2, the sunflower lanyard is an identifier of those with hidden disabilities. Bappenas will provide to affected persons a lanyard with a specific design together with an ID card that has an identifier logo, visible to others. Currently, the HR bureau and the General Affairs bureau have identified the design and are awaiting final approval from the leadership level prior to making the lanyard and ID card available.

4.3 Ministry of Home Affairs (Kemendagri)

4.3.1 General Interventions

The infrastructure and facilities assessment was held on 21 October 2025. Kemendagri's office consists of eight office buildings – buildings A to H. The assessment was conducted in the office located in Jalan Medan Merdeka Utara, Central Jakarta, with a focus on two buildings (Building B '*Unit Layanan Administrasi*' and Building F). These two buildings were chosen because the ASN with disabilities work in both Building B and F, and Building B tends to be the first building that is visited by the local government level or citizens. Kemendagri's General Affairs bureau and the HR bureau assisted during the assessment, accompanied by a representative from their ASN with disabilities with physical impairment.

Kemendagri stresses the importance of this assessment as the results will become a baseline for the renovations that will be made in 2026. Kemendagri is planning to undertake major renovations in the coming years and from the report that was provided, Kemendagri emphasized that renovating and improving accessible toilets becomes a clear priority as it is

a clear aspect that still needs improvement. Currently, one of the buildings in the Kemendagri complex is being renovated (building H) and the General Affairs bureau will ensure that accessible toilets and other reasonable accommodations will be incorporated into the building.

The second general intervention conducted in Kemendagri is the awareness training. The awareness training was conducted on 19 November. Kemendagri has a training platform that conducts online trainings every fortnight called '*Merdeka Belajar*' and the awareness training was held on the platform focusing on educating Kemendagri ASN to learn the etiquette of interacting with persons with disabilities. The session was facilitated by the Inclusion Centre and Advocacy Movement for the Disabled (SIGAB Indonesia) and attended by 166 participants, from both central and local level government. During the two-hour session, the training was divided into four sections similar to Bappenas. Following up from the training session, the HR bureau obtained exposure from other units in Kemendagri where the units inquired on what have been conducted by the HR bureau and what are the interventions.

Table 15: Pre- and post-test results from awareness training - Kemendagri

Description	Percentage
Already knowledgeable from start	21.88%
Have grasped most of the basic disability concepts	70.31%
Needs improvement	7.81%

Due to the awareness training's short session, participants mostly filled the pre-test yet did not fill out the post-test. Through the results of the pre-test, it can be concluded most of the respondents in Kemendagri obtains basic awareness on disability inclusion and how it also reflects on the number of participants attending the session. Around 70% of the participants already had basic knowledge of the disability concepts and approximately 22% already had the knowledge from the start.

Whereas for the final general intervention, the ASN data tracking survey, the survey itself was conducted in October, and the responses were obtained and compiled in November 2025. Kemendagri obtained a high response rate as they integrated the tracking survey into their performance management system. The survey was designed as mandatory for Kemendagri's ASN, with completion required as a condition for the disbursement of monthly performance allowances. This approach proved to be an effective manner of ensuring high response rates and broad participation. In total there are 6,448 ASN who filled the survey out of 6,778 ASN. Overall, 0.37% or 24 respondents reported severe difficulties. By form, the highest prevalence was found in lower mobility (0.08%) and emotion (0.08%), followed by vision (0.06%), hearing (0.05%), upper mobility (0.05%), and cognition (0.05%). Self-care was reported by 0.02%, while none reported difficulties in communication. This result has been verified by Kemendagri by thoroughly checking respondents who reported various difficulties.

Table 16: Types of Disabilities Among Survey Respondents - Kemendagri

People with severe difficulties	0.37%
By Forms	
Vision	0.06%
Hearing	0.05%
Lower mobility	0.08%
Upper mobility	0.05%
Cognition	0.05%
Emotion	0.08%
Communication	0.00%
Self-care	0.02%

4.3.2 Specific Interventions

For Kemendagri, the specific interventions that they chose to be the first steps of implementing an inclusive workplace were counselling sessions and appointing a disability champion. In December, Kemendagri conducted their first counselling session inviting ASN with disabilities within Kemendagri to share their daily experience and any pressing matters that should be highlighted. Drawing on the findings from the counselling session, a key challenge that persists is the difference in leadership perspectives and their commitment towards equality across units. Some leaders have shown appreciation towards ASN with disabilities and provide equal opportunities for them to grow and participate in monitoring and evaluation activities in the local government, yet there still remain leaders that show stigma towards marginalized groups such as ASN with disabilities, and women. Following up from this counselling session and the helpful insights that the HR bureau obtained, the bureau made the counselling session open for ASN with disabilities and those without disabilities, as well as developing mandatory counselling sessions for those with performance gaps.

Reflection from the Human Resources Bureau

Kemendagri's Human Resource bureau highlighted that, following the implementation of the interventions, the bureau gained exposure and practical experience in advancing disability-inclusive initiatives within the institution.

Through piloting the interventions internally, we were able to engage with other units. As a result, there has been growing interest from other units to collaborate in facilitating workshops and sharing practical examples on how to institutionalize disability inclusion across the ministry. —Representative from the HR bureau.

In appointing the disability champion, Kemendagri's HR bureau has been in close discussion with their leadership level since December 2025. The implementation experienced minor delays and adjustments from the initial timeline set to be appointed end of December, yet the HR bureau continues to prioritize this initiative as they recognize the importance of disability champions as change agents in advancing an inclusive workplace and advocating the needs of ASN with disabilities in Kemendagri. The HR bureau have also conducted a workshop to identify concrete action plans to implement disability inclusion and gender mainstreaming in Kemendagri, which helped to clarify the disability champion's role moving forward.

4.4 Ministry of Administrative and Bureaucratic Reform (KemenPANRB)

4.4.1 General Interventions

The infrastructure and facilities assessment was conducted on 15 December 2025. KemenPANRB has one office located in Jalan Jenderal Sudirman, South Jakarta. The General Affairs bureau assisted during the assessment as well as a representative from their ASN with disabilities, specifically those with physical impairments.

From the assessment, KemenPANRB explained that there are areas of improvement that should be prioritized such as the accessible toilets. KemenPANRB also acknowledged the importance of establishing a clear and dedicated pathway for persons with disabilities from the building entrance to the lobby, as currently the pathway is not exclusively designated and remains shared with motorcycle parking areas. KemenPANRB emphasised that renovations will be made incrementally as the building is an older structure requiring additional time for all renovations to be completed.

Recently, KemenPANRB's General Affairs Bureau have added accessible toilets in the third and fourth floors as well as additional handrails in the elevators. In 2026 there are plans to develop a small ramp on the fifth floor to ameliorate different floor levels, renovate the ramp in the front lobby to minimize its steepness, and accessible toilets on the sixth floor, as well as establishing clear signage from the building entrance to the lobby.

Reflection from the General Affairs Bureau

Based on the discussion with KemenPANRB's General Affairs bureau, they have expressed gratitude and appreciation towards this piloting program as they are now able to renovate the building and provide better facilities for their ASN with disabilities.

We have completed several checklists in the past and we had made efforts to be inclusive, but this piloting really showed us where we are still falling short. Since then, we have made improvements for the facilities, and we hope these steps will create a more supporting environment for persons with disabilities going forward — Representative from General Affairs bureau.

The second general intervention conducted in KemenPANRB was the awareness training. The awareness training was conducted on 15 December 2025 and was held online. The training was held with the same topic as other ministries, facilitated by the Inclusion SIGAB and attended by 52 participants including five from Echelon 2 levels. From this training, the pre- and post-test showed quite significant improvement from the participants. Even though only around 29% responded to the pre and post-test, it can still be seen that most of those who responded gained better knowledge on the etiquette of interacting with persons with disabilities. This highlights the training provided a quite firm baseline to continuously increase disability awareness.

Table 17: Pre- and post-test results of the awareness training - KemenPANRB

Description	Number of respondents	Percentage
Already knowledgeable from start	3	20.00%
Improved	9	60.00%
Stagnant/lower	3	20.00%

For the final general intervention, which is the ASN data tracking, to date the survey has limited progress due to its complexity and competing priorities. The planned dissemination of the survey has not yet been arranged, as arrangements for launching a standalone survey link or integrating it into the personnel management system are still under consideration and to be discussed with leadership.

4.4.2 Specific Interventions

There are two interventions specific to KemenPANRB, including the provision of visual education; and implementing flexible working arrangements for ASN with disabilities. The aim of the visual education is to provide additional information for ASN within KemenPANRB to learn more about disability inclusion and to increase awareness inside the Ministry. The visual education was initially planned to be showcased in the monitor of the KemenPANRB lobby, yet due to time constraints, the video education will be provided in an e-folder that can be accessible any time for the civil servants.

Lastly, another specific intervention is to better incorporate flexible working arrangements for civil servants (ASN) with disabilities. KemenPANRB already has an enabling mechanism for flexible working through its Ministerial Guideline on Working Days and Hours and the pilot implementation of alternative working arrangements within the Ministry. However, the eligibility criteria for beneficiaries have not explicitly included persons with disabilities. Previously, employees who were categorized under ‘special circumstances’ mainly were those who were sick, pregnant, after childbirth, or were experiencing other similar conditions.

In the revision process initiated in early January 2026, the first criterion was refined to cover employees who are sick and/or have special needs that limit mobility. Although this is a relatively minor textual adjustment, it can generate broader impacts by strengthening the policy basis for ASN with disabilities to access flexible working arrangements as a form of reasonable accommodation. At the time of writing, the finalization of the revised provision was still ongoing.

4.5 Ministry of Labor (Kemenaker)

4.5.1 General Interventions

The infrastructure and facilities assessment was held on 12 November 2025. For the assessment, it was conducted in the Kemenaker office where two buildings are located: Buildings A and B. The assessment was done for both buildings. The General Affairs bureau from Kemenaker assisted during the assessment, pointing out which parts of the building needed improvement and which they felt was already compliant with standards. After assessing the two buildings, all parties acknowledged the critical improvement required on the steep ramps throughout both buildings. These ramps do not comply with the standard of having a 6-degree incline.

Post assessment, the General Affairs Bureau directly prioritized improving accessibility to the buildings and made it a priority to ensure all ramps are fixed before December 2025. During the ministerial progress update held in mid-December, the Head of the General Affairs Bureau, Ibu Tuti Haryanti, presented that most ramps in Kemenaker had been improved and further updates in January showcased that all ramps had been renovated except for the ramp inside their Multifunction Hall which may need more time to revamp. Aside from the ramps, Kemenaker has also added additional parking spaces for persons with disabilities and will prioritize adding guiding blocks around the office complex. A clear priority for the General Affairs Bureau is to renovate the accessible toilets, and it is currently in close discussion with the leadership level, together with adding braille and audio in the elevators. Kemenaker’s General Affairs Bureau will also relocate any obstacles that obstruct the passage in narrow hallways. Overall, the assessment significantly enhanced the awareness in the Ministry of existing accessibility gaps within its buildings and increased leadership-level commitment to improve the areas.

The second general intervention conducted in Kemenaker is the awareness training that focuses on sharing knowledge on the etiquette of interacting with persons with disabilities. This training was conducted on 24 November and facilitated by SIGAB. More than 100 people participated in this training, including the Head of the Human Resources Bureau, representatives of persons with disabilities representing diverse disability types, as well as front-liners such as security officers. From the number of people that filled out the pre and post-test, it can be implied that half the people that responded felt their understanding improved due to this training whereas around 40% reported limited perceived improvement in their understanding of disability inclusion following the training. Following up from the disability inclusion training, the HR Bureau obtained feedback that more training should be conducted and the employees in Kemenaker should be able to sign language which leads to potential training in the near future depending on budget constraints.

Table 18: Pre- and post-test results of the awareness training - Kemenaker

Description	Number of respondents	Percentage
Already knowledgeable from start	8	9.87%
Improved	41	50.62%
Stagnant/lower	32	39.51%

Finally, the last general intervention conducted in Kemenaker is the ASN data tracking survey. Out of 5067 people in the Ministry, only 470 responded to the survey. The limited level of participation in the survey suggests opportunities to strengthen leadership engagement, institutional commitment, and internal socialization regarding its purpose. It is possible that some civil servants within Kemenaker may not yet fully understand the relevance and potential benefits of the survey, which may have affected its prioritization. Regarding system integration, the HR Bureau noted that the current personnel system is relatively outdated and would require additional time for integration; nevertheless, the available data remain sufficient for preliminary analysis.

Reflection from the General Affairs Bureau

Kemenaker expressed that the infrastructure and facilities assessment was an eye-opening process, revealing shortcomings in the Ministry's building design as well as its approaches to engaging with persons with disabilities. A clear example emerged after the assessment that reinforced the need for change to ensure a more inclusive environment for ASN with disabilities,

We conducted a fire drill, and we realized that our ASN with hearing impairments were unable to detect the audible alarm and needed additional assistance from their colleagues. This was an important learning moment for us (General Affairs bureau), and we would like to fix it by providing additional warning lights or running text, which is currently under discussion with our leadership —
Representatives of Kemenaker GA Bureau.

The survey result suggests that among 470 respondents, 27 of them have at least one form of moderate or severe difficulties. If we disaggregate by form, vision impairments are the most common issue at 2.3%, followed by cognition at 1.9% and lower mobility at 1.1%. Other difficulties such as upper mobility and emotion affect a smaller portion of the group (0.6% each), while communication issues were not reported at all (0.0%). However, the data has not been verified with the respondents and Kemenaker might need further clarification for the data.

Table 19: Types of Disabilities Among Survey Respondents - Kemenaker

People with moderate/severe difficulties	5.7%
By Forms	
Vision	2.3%
Hearing	0.2%
Lower mobility	1.1%
Upper mobility	0.6%
Cognition	1.9%
Emotion	0.6%

Communication	0.0%
Self-care	0.2%

4.5.2 Specific Interventions

The two specific interventions Kemenaker are the feedback channels and the portable ramp. The HR Bureau have launched a flyer on the launching of a feedback channel that can accommodate any feedback from ASN with disabilities or those without disabilities. Currently, the response rate is considered low as less than 10 people have provided feedback to the bureau. To enhance participation moving forward, the HR Bureau should establish clear standard operating procedures for receiving and following up on feedback, while also communicating the benefits of the feedback mechanism and its relevance to employees' daily work experience, including for those without disabilities.

The initial solution highlighted during the focus group sessions to provide the portable ramp is no longer relevant, as the General Affairs Bureau has undertaken direct renovations to the previously steep ramps to ensure accessibility for wheelchair users.

5 Cross-Cutting Implementation Experiences and Lessons Learned

5.1 Reflection on Implementation

Across the four participating ministries—Bappenas, Kemendagri, KemenPANRB, and Kemenaker—the assessment phase and piloting of short-term disability-inclusive workplace interventions constituted the first structured effort to systematically strengthen disability inclusion within internal workplace systems. While the pilot activities were initially framed as short-term interventions, implementation experience shows that they functioned as an institutional learning process that enabled ministries to identify inclusion gaps, test feasible solutions, and begin embedding disability inclusion into broader human resource management reform and organizational development agendas.

Implementation experiences across ministries were broadly similar in terms of challenges and enabling factors. Common capacity gaps were observed, particularly among human resource management staff and general affairs units, including limited familiarity with the definition of disability and core inclusion principles. However, meaningful participation of ASN with disabilities throughout the assessment and piloting phases strengthened institutional understanding by providing practical insights into workplace barriers and support needs. Over time, participating ministries demonstrated increased ownership by expressing interest in integrating selected interventions into internal systems and procedures. Variation in progress was mainly shaped by leadership engagement and the quality of internal coordination arrangements.

To synthesize the findings, implementation experience is reflected through the Inclusive Public Sector Workplace Framework, consisting of six institutional aspects. Across all aspects, the FAIR principles—Fairness, Access, Inclusive, and Representation—should be embedded to ensure disability inclusion is implemented equitably, effectively, and sustainably.

5.1.1 Leadership ecosystem

Implementation experience

The pilot activities highlighted that leadership engagement is a key determinant of implementation pace and institutional uptake. Active involvement of Echelon II leadership supported more timely guidance, decision-making, and execution of activities. Leadership engagement also strengthened the internal legitimacy of disability inclusion initiatives, enabling implementing units to mobilize participation and resources more effectively.

Common patterns across ministries

- Where leaders were engaged, interventions progressed more smoothly and were more likely to be integrated into internal procedures.
- Where leadership perspectives differed across units, inclusion practices were inconsistently applied, affecting fairness and equal opportunity for ASN with disabilities.

Lessons learned

- Disability inclusion cannot rely on individual goodwill; it requires structured leadership ownership and governance arrangements.
- Early establishment of leadership roles (e.g., champions/focal points) helps institutionalize inclusion and ensures continuity beyond pilot timelines.

5.1.2 Recruitment and hiring process

Implementation experience

During the pilot period, recruitment and hiring reforms were not the primary focus of interventions. This reflects the reality that recruitment-related reforms require more complex system and policy changes and are often positioned as medium- to long-term objectives.

Lessons learned

- Sequencing is important: early interventions should build the enabling environment and institutional readiness before addressing more complex recruitment system reforms.
- Future phases can incorporate inclusive recruitment and selection practices once baseline awareness, accessibility, and governance arrangements are strengthened.

5.1.3 Placement and career development

Implementation experience

Similar to recruitment, interventions related to career progression, talent management, and placement mechanisms were not prominent during the pilot phase. However, implementation experience—particularly insights emerging from counselling sessions and consultations—suggests that inclusion challenges may persist beyond hiring, including unequal access to opportunities across units and inconsistent leadership support.

Lessons learned

- Sustained inclusion requires attention not only to entry points (recruitment) but also to equal opportunity in placement, performance assessment, and career progression.
- Representation must be strengthened not only in participation but also in advancement opportunities, ensuring ASN with disabilities can access leadership pathways.

5.1.4 Inclusive work culture

Implementation experience

Institutional capacity gaps in disability awareness and understanding were common across ministries. Awareness trainings served as a foundational intervention to establish baseline understanding of disability inclusion and workplace etiquette. Importantly, these trainings generated further demand from internal stakeholders for deeper learning, such as sign language training and more practical guidance on inclusive workplace implementation.

Common patterns across ministries

- Awareness training was effective as an entry point for cultural change.

- One-off trainings are insufficient; culture change requires follow-up learning activities and integration into routine institutional training systems.

Lessons learned

- Awareness-raising interventions are effective ‘quick wins’ for building early momentum.
- Trainings should be followed by role-based capacity building and institutional learning processes to sustain changes in work culture.

5.1.5 Workplace adjustment and HR policies

Implementation experience

The pilot activities demonstrated early steps toward improving workplace adjustment mechanisms through the development of feedback channels, counselling sessions, and discussions on flexible working arrangements. These interventions were important for strengthening internal responsiveness to disability-related workplace needs. However, implementation also highlighted that these mechanisms require clear procedures, institutional trust, and strong communication to ensure utilization.

Common patterns across ministries

- Feedback channels were initiated but participation remained low, suggesting the need for stronger internal communication and follow-up mechanisms.
- Counselling sessions provided useful insights into workplace challenges and leadership disparities, supporting more inclusive HR management.

Lessons learned

- Workplace adjustment mechanisms require not only tools (channels, sessions) but also governance and standard operating procedures to ensure continuity, confidentiality, and follow-up.
- Institutional trust and visible action (‘feedback received → response taken’) are essential to improve participation.

5.1.6 Physical and digital accessibility

Implementation experience

Infrastructure and facilities assessments proved to be one of the most effective interventions in translating inclusion principles into tangible actions. Across ministries, the assessments helped identify priority accessibility gaps (e.g., ramps, accessible toilets, pathways), which were then incorporated into renovation planning and budget considerations. Although some improvements could be initiated quickly, most physical upgrades require longer planning horizons due to budget cycles and administrative procedures.

Common patterns across ministries

- Accessibility assessments created a clear baseline for planning and strengthened institutional prioritization.
- Ministries demonstrated increased ownership by integrating accessibility considerations into masterplans and renovation plans.

Lessons learned

- Early progress on physical accessibility can be achieved through targeted improvements and quick fixes, while more comprehensive renovations should be positioned as medium- to long-term priorities.
- Accessibility should be mainstreamed into procurement, renovation planning, and building management systems to sustain progress.

5.2 Cross-cutting Lessons

1. **Short-term pilot studie can trigger longer-term institutional change.**
Ministries were able to translate assessment findings into tangible actions within a relatively short timeframe, showing that early inclusion progress does not require comprehensive system reform at the outset.
2. **Meaningful participation of persons with disabilities is a critical success factor.**
Engagement of ASN with disabilities strengthened the relevance, feasibility, and acceptance of interventions and improved institutional learning.
3. **Sequencing interventions by complexity enables realistic planning.**
Simple initiatives (assessments, awareness training, coordination mechanisms) build momentum, while complex reforms (system integration, data management, infrastructure upgrades) require longer timeframes.
4. **Governance and coordination determine implementation speed and sustainability.**
Defined roles, focal points, and agreed communication channels reduce delays and enable follow-up, supporting institutionalization beyond the pilot phase.

6 Gaps Identified to Strengthen the Framework Adoption

While the pilot phase demonstrated that ministries could initiate disability-inclusive workplace measures within a relatively short timeframe, several expected outcomes have not yet been observed and are considered as gaps that were identified during the piloting process. This is consistent with the nature of the pilot interventions, which were designed as early entry points focused on strengthening baseline capacity, internal coordination, and initial workplace adjustments. Identified strategic gaps such as the need for improved recruitment results, retention and performance indicators, and organization-wide culture shifts typically require sustained implementation, stronger system integration, and longer planning horizons beyond the pilot period. In addition to the strategic gaps that were identified, further efforts are still required to strengthen the implementation of inclusive workplace across the ministries.

6.1 Strategic Level Gaps

6.1.1 Changes in recruitment outcomes, retention, or performance indicators

Recruitment outcomes

The assessment phase identified significant structural gaps in the recruitment of persons with disabilities within the public sector. Persistent barriers remain on both the supply and demand sides. In several cases, Special Disability Formation positions received no applicants. From the ministries' perspective, recruitment through these designated positions must remain aligned with workforce planning needs and job analysis, meaning that educational credentials and skills requirements continue to follow the minimum qualifications attached to each role. From the perspective of persons with disabilities, however, challenges include qualification requirements that are perceived as too high, asymmetries in access to recruitment information, and limited accessibility and reasonable accommodation during the selection process. These findings suggest that the current national approach—providing special disability formations and promoting inclusive recruitment practices—is not yet sufficient; more fundamental reforms are needed to ensure vacant positions are inclusive by design, alongside proactive outreach to achieve the 2 per cent quota target.

The pilot interventions implemented in the four ministries did not directly address these recruitment-related barriers. This is partly due to the level of complexity and coordination required for recruitment reform, which would involve medium- to long-term investments, including adjustments to recruitment regulations, procedures, outreach strategies, and accessibility provisions throughout the selection process.

Retention and performance outcomes

In contrast, the piloted activities were more closely aligned with strengthening inclusion for ASN with disabilities who are already within the system, including through workplace assessments, awareness training, and initial efforts to establish feedback or support mechanisms. However, at this stage there is no observable evidence of changes in retention rates or performance outcomes among ASN with disabilities.

Such outcomes are expected to emerge only after sustained implementation and consolidation beyond the pilot period. Achieving measurable changes in retention and performance will require continued implementation of existing interventions, complemented by more systematic organizational reforms—such as adjustments to internal HR policies, management practices, workplace adjustment procedures, and support mechanisms. Regular monitoring and follow-up will also be essential to track progress and identify which interventions generate measurable improvements over time.

6.1.2 Organization-wide institutional culture shifts

The assessment shows that awareness and understanding of disability inclusion remain uneven across the four ministries. While ministries such as Kemendagri and Kemenaker benefit from prior exposure and mandates related to accessible public services, there is no structured, systematic, or regular mechanism to promote disability inclusion within the national public sector workplace. Current efforts are largely driven by service delivery mandates rather than institutionalized workforce development and culture change.

Current interventions, particularly disability awareness and inclusion training, have begun to address gaps in mainstreaming disability inclusion within internal management systems. Pre- and post-training assessments show improvements in participants' knowledge of disability inclusion concepts and appropriate workplace etiquette. However, these gains remain largely at the individual level and have not yet translated into observable, organization-wide shifts in norms, behaviours, or institutional practices.

Meaningful institutional culture change requires broader and more sustained reinforcement mechanisms that are formally institutionalized. This includes integrating disability inclusion into standard training curricula, leadership development programs, performance management systems, internal communications, and day-to-day supervisory practices. Without such systemic reinforcement, improvements in awareness are unlikely to translate into sustained culture change.

6.2 Activity-level Gaps

6.2.1 Ministry of National Development Planning (Bappenas)

After the implementation of the piloting interventions, several short-term agendas in Bappenas should still be strengthened to further fill the identified gaps. Firstly, Bappenas should integrate their planned tracking system for ASN with disabilities into their personnel system, SiStranas. Building basic administrative infrastructure by developing data collection and tracking will help to consistently record information about their ASN with disabilities and can inform decisions on accommodations, placement, training, and career development.

Short-term efforts also include setting up simple mechanisms to identify needs and provide support in daily work. One of the interventions that needs further action is the finalization and socialization of the sunflower lanyard. The sunflower lanyard is designed to be a voluntary signal for staff who may require additional assistance which may help colleagues and frontline service staff to respond more appropriately. Another intervention that should be continued is the development of the feedback channel and its optimization. A dedicated feedback channel where employees can report barriers, request reasonable accommodation, and provide suggestions without fear of stigma will show a functioning inclusion system that depends on trust and responsiveness.

6.2.2 Ministry of Home Affairs (Kemendagri)

Following the piloting phase, a short-term agenda that should be a priority for Kemendagri is the appointment of disability champions within the Ministry. Appointing a disability champion within the Ministry will help to coordinate internal follow-up, encourage compliance across units, and serve as a focal point for inclusion efforts. This role can also support the translation of assessment findings into concrete actions and ensure sustainability of inclusive workplace initiatives.

Complementing this, Kemendagri have also implemented counselling support that is an important measure for wellbeing and retention. Moving forward, continuously implementing this will help employees with disabilities to face unwanted stress related to workplace barriers, discrimination, or adjustment challenges.

6.2.3 Ministry of Administrative and Bureaucratic Reform (KemenPANRB)

In the post-piloting phase, several agendas remain outstanding for KemenPANRB that may need to be prioritized to continue ensuring an inclusive workplace. These short-term agendas are integrating the disability tracking system into their personnel system, establishing visual education on disability inclusion, as well as formalizing flexible working arrangements (for ASN with disabilities).

Embedding a disability tracking system will help KemenPANRB to accurately track ASN with disabilities as well as enhancing the Ministry's ability to plan and implement inclusive measures such as reasonable accommodations, placement, training, and career development. Providing visual education creates a sustainable outlet for employees to continuously learn how to interact with ASN with disabilities. Furthermore, having flexible work arrangements for employees with disabilities, based on job roles and individual needs, will ensure that inclusion is not just limited to physical access in the office alone.

6.2.4 Ministry of Labor (Kemenaker)

Upon completion of the piloting phase, Kemenaker may focus on a couple of short-term agendas to fill the identified institutional gaps such as integrating the disability tracking system into their personal system as well as following up on the feedback channel and its usage. With Kemenaker's large number of civil servants, it is important to have a strong administrative system to track ASN with disabilities. Ensuring a strong administrative system will help to record accurate information and support informed decision-making related to the needs of ASN with disabilities. Also, the feedback channel will become an access point for ASN with disabilities to report barriers or reasonable accommodations, which demonstrates an effective system that values and responds to their feedback.

7 Policy Recommendations

Building on the assessment findings, pilot implementation, and lessons learned, this section proposes strategic actions to advance more systematic and sustainable inclusive workplaces in the public sector. The recommendations draw on Prospera's study, '*Reaching the 2% Employment Target for ASN with Disabilities*' (2024), and are structured around six core dimensions of inclusive workplace development.

These recommendations are aligned with the RPJMN 2025–2029 target of increasing formal sector employment for persons with disabilities to 12% by 2029. As one of the largest formal employers in Indonesia, the public sector has a critical role in achieving this target; both by expanding inclusive recruitment and retention within the civil service and by demonstrating institutional standards that can influence inclusive employment practices across other sectors.

Table 20: Summary of Recommended Actions

Dimension	Short Term (6–12 months)	Medium Term (2026–2028)	Long Term (2028–2033)
Leadership Ecosystem	Disability inclusion & unconscious bias training for leaders and HR; appoint disability champions/focal points	Formalize champion roles through internal policy; integrate inclusion into mandatory leadership training (e.g., DiklatPIM)	Promote mentorship culture and inclusive leadership practices to support career progression
Recruitment & Hiring	Strengthen outreach (OPDs, KerjaBilitas); promote ASN disability success stories	Maintain and refine Special Disability Formations and inclusive general recruitment; prepare selection panels	Embed accessibility and competency-based assessments across all recruitment stages; review job criteria for inclusivity
Placement & Career Development	Consultative placement process to align roles with needs and strengths	Expand access to assignments, projects, promotion pathways; strengthen in-job training	Establish structured leadership, mentorship, and networking programs for ASN with disabilities
Inclusive Work Culture	Awareness activities; establish feedback channels	Institutionalize regular inclusion training; develop peer networks	Strengthen respectful workplace policies and accessible complaint mechanisms
Workplace Adjustment & HR Policies	Pilot flexible work arrangements; clarify accommodation procedures	Develop formal flexible work policies; strengthen support for transfers and work travel	Introduce tailored leave and long-term wellbeing support mechanisms
Physical & Digital Accessibility	Quick-win accessibility improvements (ramps, signage, meeting access)	Conduct regular accessibility audits; expand assistive technologies	Ensure sustained funding and institutionalized accessibility standards

Source: Prospera's analysis (2025)

7.1 Leadership Ecosystem

Short-term (next 6–12 months)

In the short term, strengthening inclusive leadership can be an important entry point to accelerate implementation across institutions. It is recommended that ministries/agencies consider providing disability inclusion and unconscious bias training for leaders and HR units, with an emphasis on practical decision-making (e.g., recruitment, supervision, performance management, and accommodations). To support quality improvement, training can be complemented with simple evaluation tools such as pre- and post-assessments.

To support coordination, ministries may also consider appointing a disability inclusion focal point or champion who can facilitate internal follow-up, connect HR and operational units, and serve as a reference point for inclusion-related initiatives.

Medium-term (2026–2028)

Over the medium term, it may be helpful to strengthen sustainability by formalizing the disability champion role through internal policies or regulations, including clearer responsibilities, reporting lines, and allocation of resources. This can reduce reliance on individual initiative and support more consistent implementation across units.

In addition, integrating disability inclusion content into mandatory leadership training programs (e.g., DiklatPIM) could strengthen the pipeline of inclusive leaders and help institutionalize inclusive management practices.

Long-term (2028–2033)

In the longer term, leadership ecosystems can be further strengthened by promoting mentorship and inclusive leadership practices, where leaders are equipped and encouraged to support ASN with disabilities through regular dialogue, feedback, and career guidance. This can help improve confidence, participation, and representation in strategic assignments and leadership pathways.

7.2 Recruitment and Hiring Process

Short-term (next 6–12 months)

To support near-term improvements in recruitment outcomes, institutions may benefit from strengthening attraction strategies. This can include partnering with OPDs and disability communities to inform outreach approaches, identify potential candidates, and improve the accessibility and clarity of job advertisements. Platforms such as KerjaBilites can also be leveraged to broaden outreach.

It may also be beneficial to promote success stories of ASN with disabilities to strengthen public awareness and encourage wider participation in civil service recruitment, particularly as information on employment experience in public institutions remains limited.

Medium-term (2026–2028)

Over the medium term, it would be helpful to maintain the availability of both:

- Disability Special Positions (Formasi Khusus Disabilitas), with continued refinement of inclusive criteria and support; and
- General positions, to encourage applicants with disabilities to participate across broader recruitment pathways.

In parallel, institutions could consider strengthening participation of eligible applicants with disabilities in senior-level selection processes, including senior leadership position (*Jabatan Pimpinan Tinggi* – JPT) as part of longer-term efforts to improve representation across grades.

Recruitment implementation can also be strengthened through measures such as improving the preparedness of selection panels (e.g., inclusion guidance materials and training) and ensuring recruitment processes reduce the risk of discriminatory assumptions.

Beyond strengthening the process of recruiting ASN with disabilities, medium-term efforts could focus on increasing the recruitment and participation of persons with disabilities through expanding outreach and engagement strategies to broaden the talent pool, improving accessibility of the recruitment platforms as well as the testing mechanisms, and identifying current barriers in the recruitment process. It is also an important aspect to strengthen data collection to ensure progression rates, enabling evidence-based adjustments to recruitment strategies.

Long-term (2028–2033)

In the longer term, recruitment systems can be further strengthened by embedding inclusive practices across all stages, including:

- ensuring recruitment venues and platforms are accessible,
- providing tailored support during selection stages, and
- applying competency-based assessment approaches that focus on job-relevant capability.

It may also be valuable to review job criteria and job design to ensure education requirements are aligned with realistic competency needs. This could include broadening criteria beyond formal education to include relevant experience, expertise, and soft skills, while considering structural barriers that may limit access to education and training for some groups.

The recruitment systems should also be integrated more systematically within the national civil service management framework. Gradual incorporation of inclusive recruitment principles into relevant regulations, technical guidelines, as well as alignment with merit system oversight mechanisms may be included in the long term. This will help the national workforce planning process to better anticipate and facilitate the participation of ASN with disabilities across ministries/agencies and levels. As stated in the medium term, strengthening data management and reporting within existing information systems will also be crucial in the long term to support monitoring and policy refinement. Over time, these measures may contribute to a more institutionalised approach for inclusive recruitment.

7.3 Placement and Career Development

Short-term (next 6–12 months)

In the short term, retention outcomes can be supported through consultative approaches to placement. It is recommended that institutions consider implementing a consultation process for job placement, enabling ASN with disabilities to share their needs, required adjustments, strengths, and aspirations. This can reduce the risk of misplacement and improve early engagement and performance.

Medium-term (2026–2028)

Over the medium term, institutions may benefit from expanding the range of roles available to ASN with disabilities and supporting equal access to:

- work assignments,
- strategic projects, and
- promotion pathways.

In addition, providing in-job training and capability-building opportunities could help address constraints related to unequal access to formal education and training. This approach allows institutions to leverage diverse talents and strengthen workforce productivity.

Long-term (2028–2033)

In the longer term, institutions could consider establishing more structured leadership and confidence-building programs for ASN with disabilities, such as:

- tailored training,
- mentorship arrangements, and
- professional networking opportunities.

These measures can support participation in decision-making roles and help strengthen inclusive representation within the civil service.

7.4 Inclusive Work Culture

Short-term (next 6–12 months)

To strengthen daily workplace inclusion, institutions may consider early cultural interventions such as disability awareness activities and the establishment of channels for constructive feedback. This can help reduce stigma, strengthen respectful workplace behaviour, and encourage early identification of barriers.

Medium-term (2026–2028)

In the medium term, it may be beneficial to institutionalize inclusive culture measures through:

- regular training on disability inclusion and unconscious bias for all staff,
- development of peer support groups or networking platforms for ASN with disabilities, and
- structured engagement with ASN disability groups to inform workplace improvements.

Peer networks can support belonging and reduce isolation, while also strengthening confidence and participation.

Long-term (2028–2033)

In the longer term, institutions could strengthen workplace safety and trust through respectful workplace policies and accessible complaint mechanisms. Establishing clear procedures and consistent follow-up can reinforce protection against discrimination and harassment, supporting a safer and more inclusive environment for all employees.

7.5 Workplace Adjustment and HR Policies

Short-term (next 6–12 months)

Institutions may consider strengthening HR readiness for reasonable accommodation, supported by consultation with ASN with disabilities. Early improvements could include piloting flexible work arrangements where appropriate and establishing clearer internal processes for accommodation requests and follow-up.

Medium-term (2026–2028)

Over the medium term, developing and implementing flexible work policies (including work-from-home arrangements where relevant) may help address commuting barriers and uneven accessibility of transportation infrastructure.

It may also be beneficial to strengthen support for work travel and transfers (rotasi/mutasi), given their importance for performance and career progression. Support measures can include transportation arrangements, relocation assistance, and ensuring accessibility of work premises in new placements, developed through consultation.

Long-term (2028–2033)

In the longer term, institutions may consider providing more tailored health-related leave arrangements and supporting facilities. These measures can enable ASN with disabilities to access medical appointments and rehabilitation without undue impact on performance evaluation, supporting long-term retention and wellbeing.

7.6 Physical and Digital Accessibility

Short-term (next 6–12 months)

In the short term, institutions may benefit from prioritizing practical, low-cost improvements that remove immediate barriers. Examples include ensuring meeting and work locations are accessible, improving signage and wayfinding, providing ramps or accessible seating, and arranging peer/team assistance where needed.

Medium-Term (2026–2028)

Over the medium term, it would be beneficial to conduct regular accessibility audits of buildings and work facilities and to ensure findings are followed by improvements. Institutions may also consider expanding the availability of assistive technologies and accessibility features, such as screen readers, captioning services, adapted keyboards, and ergonomic supports.

Long-Term (2028–2033)

In the longer term, sustained funding allocation for accessibility improvements can support the quality and continuity of inclusive workplaces. This includes building modifications, assistive devices, and office redesign, complemented by periodic audits to ensure functional accessibility and long-term usability.

9 Annex

9.1 Annex 1: Instrument for ASN Data Tracking Survey

SURVEI: ASN PENYANDANG DISABILITAS – KEMENTERIAN/LEMBAGA

Yth. Bapak/Ibu ASN di Kementerian/Lembaga,

Kami menyelenggarakan survei singkat, yang diperkirakan memerlukan waktu sekitar 10-15 menit, untuk memahami pengalaman serta dukungan akomodasi untuk membuat lingkungan kerja yang lebih inklusif bagi para ASN penyandang disabilitas. Jawaban Bapak/Ibu akan digunakan untuk memperbaiki kebijakan dan layanan internal, disajikan dalam bentuk agregat (tanpa nama) dan dijaga kerahasiaannya. Hasil survei tidak akan memengaruhi status kepegawaian maupun penilaian kinerja. Untuk informasi atau pertanyaan lebih lanjut, dapat menghubungi Biro SDM. Terima kasih atas waktu yang diluangkan untuk mengisi survei ini.

Salam,

Biro SDM Kementrian/Lembaga

A. Informasi Diri

A2	Jenis Kelamin	1. Laki-laki 2. Perempuan
A3	Usia	[][] Tahun
A4	Unit/direktorat	
A5	Posisi/level saat ini	
A6	Tahun mulai bekerja di unit/direktorat saat ini	Tahun [][][][]
A7	Tahun diangkat jadi ASN	Tahun [][][][]

B. Identifikasi Kesulitan Fungsional

B1	Apakah Bapak/Ibu saat ini mengalami gangguan/kesulitan untuk melihat, meskipun menggunakan kacamata? Kesulitan melihat dapat meliputi: <i>Kesulitan melihat dari sangat dekat / dari jauh / dari satu mata / ke depan, meski sudah memakai kacamata atau lensa kontak</i>	1. Ya, sama sekali tidak bisa melihat 2. Ya, banyak kesulitan 3. Ya, sedikit kesulitan 4. Tidak mengalami kesulitan àB2
B1_a	Sejak kapan Bapak/Ibu mengalami gangguan/kesulitan tersebut?	1. Sebelum bekerja di instansi saat ini àB1_c 2. Setelah bekerja di instansi saat ini
B1_b	Tahun mulai mengalami gangguan pengelihat	Tahun [][][][]
B1_c	Apakah Bapak/Ibu pernah menyampaikan perihal gangguan/kesulitan ini kepada atasan atau unit kepegawaian?	1. Ya àB1_d 2. Tidak
B1_d	Kapan Bapak/Ibu menyampaikan gangguan/kesulitan yang dihadapi kepada atasan atau unit kepegawaian? Bagaimana tanggapan yang diberikan atasan atau unit kepegawaian tersebut?	
B2	Apakah Bapak/Ibu saat ini mengalami gangguan/kesulitan untuk mendengar? Kesulitan mendengar dapat meliputi: <i>Kesulitan mendengar di lingkungan berisik / lingkungan sepi / tidak bisa membedakan sumber suara / mendengar dari satu telinga / kedua telinga, meskipun sudah memakai alat bantu dengar</i>	1. Ya, sama sekali tidak bisa mendengar 2. Ya, banyak kesulitan 3. Ya, sedikit kesulitan 4. Tidak mengalami kesulitan àB3

B2_a	Sejak kapan Bapak/Ibu mengalami gangguan/kesulitan tersebut?	1. Sebelum bekerja di instansi saat ini à B2_c 2. Setelah bekerja di instansi saat ini
B2_b	Tahun mulai mengalami gangguan/kesulitan untuk mendengar	Tahun [][][][]
B2_c	Apakah Bapak/Ibu pernah menyampaikan perihal gangguan/kesulitan ini kepada atasan atau unit kepegawaian?	1. Ya 2. Tidak
B2_d	Kapan Bapak/Ibu menyampaikan gangguan/kesulitan yang dihadapi kepada atasan atau unit kepegawaian? Bagaimana tanggapan yang diberikan atasan atau unit kepegawaian tersebut?	_____ _____
B3	Apakah Bapak/Ibu saat ini mengalami gangguan/kesulitan untuk berjalan atau naik tangga? Kesulitan berjalan atau naik tangga dapat meliputi: <i>Kesulitan berjalan jarak dekat (100 meter / 90-100 langkah) / jarak jauh (500 meter / 400-500 langkah) / menapak naik/turun/ke ketinggian berbeda</i>	1. Ya, sama sekali tidak bisa berjalan/naik tangga 2. Ya, banyak kesulitan 3. Ya, sedikit kesulitan 4. Tidak mengalami kesulitan à B4
B3_a	Sejak kapan Bapak/Ibu mengalami gangguan/kesulitan tersebut?	1. Sebelum bekerja di instansi saat ini à B3_c 2. Setelah bekerja di instansi saat ini
B3_b	Tahun mulai mengalami gangguan/kesulitan untuk berjalan atau naik tangga	Tahun [][][][]
B3_c	Apakah Bapak/Ibu pernah menyampaikan perihal gangguan/kesulitan ini kepada atasan atau unit kepegawaian?	1. Ya 2. Tidak
B3_d	Kapan Bapak/Ibu menyampaikan gangguan/kesulitan yang dihadapi kepada atasan atau unit kepegawaian? Bagaimana	_____ _____

	tanggapan yang diberikan atasan atau unit kepegawaian tersebut?	
B4	Apakah Bapak/Ibu saat ini mengalami gangguan/kesulitan untuk menggunakan/menggerakkan tangan/jari? Kesulitan menggunakan/menggerakkan tangan/jari dapat meliputi: <i>Kesulitan untuk mengangkat botol 2 liter / laptop / pouch minyak goreng 2 liter / semangka / 2 botol air mineral standar / 1 botol besar air mineral, dari setinggi pinggang ke setinggi mata</i>	1. Ya, sama sekali tidak bisa menggunakan/menggerakkan tangan/jari 2. Ya, banyak kesulitan 3. Ya, sedikit kesulitan 4. Tidak mengalami kesulitan à B5
B4_a	Sejak kapan Bapak/Ibu mengalami gangguan/kesulitan tersebut?	1. Sebelum bekerja di instansi saat ini à B4_c 2. Setelah bekerja di instansi saat ini
B4_b	Tahun mulai mengalami gangguan/kesulitan untuk menggunakan/menggerakkan tangan/jari	Tahun [][][][]
B4_c	Apakah Bapak/Ibu pernah menyampaikan perihal gangguan/kesulitan ini kepada atasan atau unit kepegawaian?	1. Ya 2. Tidak
B4_d	Kapan Bapak/Ibu menyampaikan gangguan/kesulitan yang dihadapi kepada atasan atau unit kepegawaian? Bagaimana tanggapan yang diberikan atasan atau unit kepegawaian tersebut?	
B5	Apakah Bapak/Ibu saat ini mengalami gangguan/kesulitan dalam hal mengingat atau berkonsentrasi?	1. Ya, selalu mengalami kesulitan 2. Ya, seringkali mengalami kesulitan 3. Ya, sedikit mengalami kesulitan 4. Tidak mengalami kesulitan à B6

	Kesulitan mengingat/berkonsentrasi dapat meliputi: <i>Sehari-hari mengalami kesulitan menemukan tujuan atau berkonsentrasi dalam melakukan sesuatu, hilang arah, lupa tanggal, sulit mengingat omongan orang yang baru disebut, bingung atau takut dengan sebagian besar keadaan. (bukan karena sedang mengalami tekanan tinggi / stres / menggunakan obat-obatan)</i>	
B5_a	Sejak kapan Bapak/Ibu mengalami gangguan/kesulitan tersebut?	1. Sebelum bekerja di instansi saat ini à B5_c 2. Setelah bekerja di instansi saat ini
B5_b	Tahun mulai mengalami gangguan/kesulitan mengingat atau berkonsentrasi	Tahun [][][][]
B5_c	Apakah Bapak/Ibu pernah menyampaikan perihal gangguan/kesulitan ini kepada atasan atau unit kepegawaian?	1. Ya 2. Tidak
B5_d	Kapan Bapak/Ibu menyampaikan gangguan/kesulitan yang dihadapi kepada atasan atau unit kepegawaian? Bagaimana tanggapan yang diberikan atasan atau unit kepegawaian tersebut?	
B6	Apakah Bapak/Ibu saat ini mengalami gangguan perilaku dan/atau emosional ?	1. Ya, selalu mengalami gangguan 2. Ya, seringkali mengalami gangguan 3. Ya, sedikit mengalami gangguan 4. Tidak Mengalami gangguan à B7
B6_a	Sejak kapan Bapak/Ibu mengalami gangguan/kesulitan tersebut?	1. Sebelum bekerja di instansi saat ini à B6_c 2. Setelah bekerja di instansi saat ini
B6_b	Tahun mulai mengalami gangguan perilaku dan/atau emosional	Tahun [][][][]
B6_c	Apakah Bapak/Ibu pernah menyampaikan perihal	1. Ya

	gangguan/kesulitan ini kepada atasan atau unit kepegawaian?	2. Tidak
B6_d	Kapan Bapak/Ibu menyampaikan gangguan/kesulitan yang dihadapi kepada atasan atau unit kepegawaian? Bagaimana tanggapan yang diberikan atasan atau unit kepegawaian tersebut?	_____ _____
B7	Apakah Bapak/Ibu saat ini mengalami gangguan/kesulitan berbicara dan/atau memahami/berkomunikasi dengan orang lain? Kesulitan berbicara/memahami/berkomunikasi dengan orang lain dapat meliputi: <i>Kesulitan bersuara, menggunakan isyarat, menulis, memahami atau dipahami.</i>	1. Ya, sama sekali tidak bisa memahami/dipahami/berkomunikasi 2. Ya, banyak mengalami kesulitan 3. Ya, sedikit mengalami kesulitan 4. Tidak mengalami kesulitan → B8
B7_a	Sejak kapan Bapak/Ibu mengalami gangguan/kesulitan tersebut?	1. Sebelum bekerja di instansi saat ini → B7_c 2. Setelah bekerja di instansi saat ini
B7_b	Tahun mulai mengalami gangguan/kesulitan berbicara dan/atau memahami/berkomunikasi dengan orang lain	Tahun [][][][]
B7_c	Apakah Bapak/Ibu pernah menyampaikan perihal gangguan/kesulitan ini kepada atasan atau unit kepegawaian?	1. Ya 2. Tidak
B7_d	Kapan Bapak/Ibu menyampaikan gangguan/kesulitan yang dihadapi kepada atasan atau unit kepegawaian? Bagaimana tanggapan yang diberikan atasan atau unit kepegawaian tersebut?	_____ _____

B8	Apakah Bapak/Ibu saat ini mengalami gangguan/kesulitan dalam mengurus diri sendiri ? <i>Kesulitan mengurus diri sendiri dapat meliputi: Mandi termasuk keramas, cuci kaki, ambil peralatan mandi dan air. Pakai baju termasuk mengambil baju dari lemari, pakai kancing, membuat simpul, pakai retsleting, dll</i>	1. Ya, sama sekali tidak bisa mengurus diri sendiri 2. Ya, banyak mengalami kesulitan 3. Ya, sedikit mengalami kesulitan 4. Tidak mengalami kesulitan à DIF_CHECK
B8_a	Sejak kapan Bapak/Ibu mengalami gangguan/kesulitan tersebut?	1. Sebelum bekerja di instansi saat ini → B8_c 2. Setelah bekerja di instansi saat ini
B8_b	Tahun mulai mengalami gangguan/kesulitan dalam mengurus diri sendiri	Tahun [][][][]
B8_c	Apakah Bapak/Ibu pernah menyampaikan perihal gangguan/kesulitan ini kepada atasan atau unit kepegawaian?	1. Ya 2. Tidak
B8_d	Kapan Bapak/Ibu menyampaikan gangguan/kesulitan yang dihadapi kepada atasan atau unit kepegawaian? Bagaimana tanggapan yang diberikan atasan atau unit kepegawaian tersebut?	3. _____ _____

DIF_CHECK	(HANYA UNTUK PEWAWANCARA/SISTEM) APAKAH RESPONDEN MENGALAMI KESULITAN FUNGSIONAL? (B1 & B2 & B3 & B4 & B5 & B6 & B7 & B8 != 4)	1. Ya 2. Tidak à SELESAI
------------------	---	------------------------------------

C. Kendala dalam beraktivitas di tempat kerja

Bagian ini berfokus pada kendala dalam beraktivitas di tempat kerja bagi responden dengan disabilitas.

C1	Dalam 3 bulan terakhir, apakah Bapak/Ibu mengalami	1. Ya 2. Tidak à D1
-----------	--	-------------------------------

	kendala/kesulitan dalam beraktivitas di tempat kerja? <i>Istilah ‘beraktivitas’ yang dimaksud juga termasuk pulang dan pergi dari/ke tempat kerja</i>	
C2	Apa hambatan utama yang Bapak/Ibu alami ketika beraktivitas di tempat kerja Bapak/Ibu saat ini? <i>Jawaban bisa lebih dari satu</i>	A. Keterbatasan sarana transportasi ke tempat kerja B. Akses masuk gedung tidak mudah baik karena desain akses gedung maupun kondisinya (contoh: Jalan rusak, ada parit tidak tertutup, dll) C. Akses ke ruang kerja yang tidak mudah (contoh: lift/tangga sulit diakses, ruang kerja terlalu sempit untuk mobilitas) D. Fasilitas penunjang tidak memadai (contoh: toilet/parkiran sulit untuk diakses/digunakan) E. Teknologi yang digunakan tidak aksesibel (contoh: website dan aplikasi untuk pekerjaan tidak dalam format yang mudah diakses) F. Peralatan dan perlengkapan kerja sulit diakses (contoh: <i>keyboard</i> tidak dilengkapi braille untuk penyandang disabilitas, tidak kontras, dan tidak tersedia back-lighting, meja kerja terlalu tinggi/rendah, pencahayaan terlalu redup)

		Z. Lainnya, sebutkan_____
C3	Menurut Bapak/Ibu, apa saja hal-hal yang perlu disediakan oleh tempat kerja Bapak/Ibu supaya beraktivitas di tempat kerja menjadi mudah?	_____ —

D. Kendala dalam menjalankan tata cara/peraturan kerja

Bagian ini berfokus pada kendala dalam menjalankan tata cara/peraturan kerja bagi responden dengan disabilitas.

D1	Dalam 3 bulan terakhir, apakah Bapak/Ibu mengalami kendala/kesulitan dalam tata cara/peraturan kerja? <i>Contoh: Aturan jam masuk dan pulang, jatah cuti kerja, keharusan untuk selalu hadir di kantor maupun perjalanan dinas, dan lain-lain</i>	1. Ya 2. Tidak àE1
D2	Apa hambatan utama yang Bapak/Ibu alami ketika dalam menjalani tata cara/peraturan kerja yang berlaku saat ini? <i>Jawaban bisa lebih dari satu</i>	A. Jam masuk dan pulang kerja tidak fleksibel B. Durasi jam istirahat kurang memadai C. Waktu kerja seringkali harus lembur D. Jatah cuti kerja tidak cukup untuk mengakomodasi kebutuhan cuti sakit, perawatan rutin (termasuk perbaikan alat bantu), dan terapi E. Keharusan untuk selalu hadir di lokasi kerja F. Keharusan untuk dinas di lokasi atau kota lain

		Z. Lainnya, sebutkan _____
D3	Menurut Bapak/Ibu, apa saja peraturan/ketentuan kerja yang perlu diubah untuk meningkatkan produktivitas dan kesejahteraan Bapak/Ibu sebagai ASN?	_____ —

E. Kendala dalam mengembangkan karir

Bagian ini berfokus pada kendala dalam mengembangkan karir bagi responden dengan disabilitas.

E1	Apakah Bapak/Ibu merasa posisi kerja anda saat ini sesuai dengan kualifikasi/tingkat Pendidikan yang dimiliki? Jika tidak, mengapa Bapak/Ibu merasa demikian?	1. Sesuai 2. Tidak sesuai, karena _____
E2	Dibandingkan dengan rekan-rekan kerja lainnya, apakah Bapak/Ibu merasa pengembangan karir Bapak/Ibu lebih lambat dari yang lainnya?	1. Ya 2. Tidak → F1
E3	Menurut Bapak/Ibu, apa hambatan yang dialami Bapak/Ibu sehingga Bapak/Ibu merasa pengembangan karir Bapak/Ibu lebih lambat? <i>Jawaban bisa lebih dari satu</i>	A. Informasi terkait kesempatan mengikuti promosi tidak mudah diakses B. Kriteria atau persyaratan promosi tidak mengakomodasi kondisi saya saat ini C. Program pelatihan yang tersedia tidak didukung dengan bantuan atau akomodasi yang wajar bagi pegawainya D. Ada bias yang tidak disadari dalam menilai talenta atau promosi oleh atasan

		E. Proses pengelolaan talenta dan promosi tidak didukung dengan bantuan atau akomodasi yang wajar F. Pimpinan/supervisor tidak pernah merekomendasikan atau mensponsori saya untuk dimasukkan dalam talent pool atau mengikuti promosi Z. Lainnya, sebutkan _____
E4	Menurut Bapak/Ibu, apa saja hal-hal yang diperlukan Bapak/Ibu untuk memudahkan Bapak/Ibu dalam proses pengembangan karir?	_____ —

F. Kendala dalam bersosialisasi dan berinteraksi dengan rekan kerja maupun atasan

Bagian ini berfokus pada pengalaman Bapak/Ibu dalam bersosialisasi dan berinteraksi dengan rekan kerja maupun atasan.

F1	Apakah Bapak/Ibu merasa bahwa rekan kerja maupun atasan senantiasa menghargai dan mendukung di tempat kerja?	1. Ya 2. Tidak 3. Tidak tahu
F2	Apakah Bapak/Ibu mengalami kendala dalam berinteraksi dengan rekan kerja ataupun atasan dalam 3 bulan terakhir?	1. Ya 2. Tidak → G1
F3	Apa saja kendala Bapak/Ibu dalam bersosialisasi dan berinteraksi dengan rekan kerja maupun atasan? <i>Jawaban bisa lebih dari satu</i>	A. Saya tidak mengerti apa yang mereka katakan/komunikasikan (misalnya karena tulisan tidak terbaca, atau percakapan di meja sulit diikuti) B. Sebagian besar rekan kerja jarang berinteraksi dengan saya, namun berinteraksi intens dengan rekan kerja lainnya C. Kurangnya pemahaman rekan kerja/atasan mengenai etika

		berinteraksi dengan penyandang disabilitas D. Rekan kerja atau atasan memiliki sikap atau stereotip negatif terhadap penyandang disabilitas E. Kesulitan menyampaikan opini ataupun kebutuhan khusus karena merasa sungkan F. Informasi penting sering tidak disampaikan dengan format yang bisa saya akses atau pahami G. Kurangnya dukungan untuk berjejaring/berpartisipasi dalam kegiatan informal di tempat kerja H. Kebutuhan saya sebagai Disabilitas tidak ditanggapi atau dipenuhi dengan baik Z. Lainnya, sebutkan_____
F3	Apa saja hal yang diperlukan untuk memudahkan Bapak/Ibu dalam berkomunikasi dan berinteraksi dengan rekan kerja maupun atasan?	_____

G. Kendala dalam bersosialisasi dan berinteraksi dengan rekan kerja maupun atasan

Bagian ini berfokus pada apa saja bentuk dukungan yang diberikan atasan/rekan kerja/lembaga untuk mempermudah kegiatan sehari-hari di tempat kerja

G1	Selama Bapak/Ibu bekerja di sini, apakah Bapak/Ibu pernah mendapat dukungan alat/sarana dari atasan/rekan kerja/lembaga? <i>Dukungan alat/sarana dapat meliputi:</i> <i>Kursi roda, laptop dengan software screen reader, kaki/tangan buatan, hearing aid, tongkat putih, dll</i>	1. Ya 2. Tidak → G3
-----------	---	--

G2	Apa saja bentuk dukungan alat/sarana yang diterima oleh Bapak/Ibu?	_____
G3	Selama Bapak/Ibu bekerja di sini, apakah Bapak/Ibu pernah mendapat dukungan sarana non-fisik dari atasan/rekan kerja/lembaga? <i>Dukungan non-fisik dapat meliputi:</i> <i>Flexible working arrangement, pendampingan khusus oleh atasan/rekan kerja, akses gratis ke sesi kounseling, penyesuaian beban kerja/jenis pekerjaan, dll</i>	1. Ya 2. Tidak → SELESAI
G4	Apa saja bentuk dukungan sarana non- fisik yang diterima oleh Bapak/Ibu?	_____

Annex 2: Infrastructure and Facilities Assessment Instrument

10 INSTRUMEN ASESMEN AKSESIBILITAS GEDUNG & LINGKUNGAN KERJA

1. Informasi Umum

Nama Instansi : _____

Nama Gedung : _____

Alamat : _____

Jenis Gedung : ☐ Kantor pusat ☐ Kantor perwakilan ☐ Gedung layanan publik lainnya

Jumlah Lantai : _____

Tahun gedung ini dibangun: _____

Apakah gedung ini pernah direnovasi untuk peningkatan aksesibilitas?

☐ Ya, tahun renovasi: _____ ☐ Tidak

Tim Pelaksana Asesmen: _____

Tanggal Pelaksanaan Asesmen: _____

2. Aksesibilitas Fisik – Checklist Teknis

A. Jalur Akses ke Gedung

No.	Fasilitas	Jawaban	Catatan
A1	Jalur pedestrian bebas halangan, cukup lebar (≥ 120 cm), rata, dan tidak licin	1. Tersedia di seluruh jalan pedestrian di lingkungan kantor 2. Tersedia di sebagian besar jalan pedestrian di lingkungan kantor 3. Tersedia di sebagian kecil jalan pedestrian di lingkungan kantor 4. Belum ada jalur pedestrian yang bebas halangan dan cukup lebar di lingkungan kantor	
A2	Tersedia jalur <i>guiding block</i> untuk pegawai netra, yang tidak terhalang pohon/tiang/benda lain	1. Tersedia guiding block di seluruh lingkungan kantor 2. Tersedia guiding block di sebagian besar area lingkungan kantor 3. Tersedia guiding block di sebagian kecil area lingkungan kantor 4. Belum tersedia guiding block di area lingkungan kantor	
A3	Permukaan jalan tidak licin, tidak ada lubang/halangan	1. Sebagian besar permukaan jalan di lingkungan kantor tidak licin dan tidak ada lubang/halangan 2. Sebagian besar permukaan jalan di lingkungan kantor tidak licin dan tidak ada lubang/halangan 3. Sebagian besar permukaan jalan di lingkungan kantor tidak licin dan tidak ada lubang/halangan	

No.	Fasilitas	Jawaban	Catatan
		4. Belum ada permukaan jalan yang tidak licin maupun bebas lubang/halangan di lingkungan kantor	
A4	Ramp masuk tersedia dan sesuai standar. (Kemiringan dengan perbandingan antara tinggi dan kelandaian $\leq 1:10$ luar gedung, $\leq 1:8$ dalam gedung. Lebar minimum dari ramp 95 cm tanpa tepi pengaman, dan 120 cm dengan tepi pengaman dan handrail)	1. Tersedia ramp masuk yang sesuai standar di seluruh akses masuk kantor 2. Tersedia ramp masuk yang sesuai standar di sebagian besar akses masuk kantor 3. Tersedia ramp masuk yang sesuai standar di sebagian kecil akses masuk kantor 4. Tersedia ramp masuk di seluruh/sebagian akses masuk kantor, namun belum sesuai standar kemiringan 5. Belum tersedia ramp masuk di seluruh akses masuk kantor 6. Tidak ada ramp di lingkungan kantor karena tidak diperlukan (ketinggian pintu masuk kantor sejajar dengan jalan)	
A5	Kemiringan tangga kurang dari 60°, memiliki pegangan, dan step block dengan warna berbeda/kontras di setiap ujung anak tangga	1. Seluruh tangga di lingkungan kantor sudah memiliki pegangan dan kemiringan tangga kurang dari 60 derajat, serta step block 2. Sebagian besar tangga di lingkungan kantor sudah memiliki pegangan dan kemiringan tangga kurang dari 60 derajat, serta step block 3. Sebagian kecil tangga di lingkungan kantor sudah memiliki pegangan dan kemiringan tangga kurang dari 60 derajat, serta step block 4. Belum ada tangga di lingkungan kantor yang sudah memiliki pegangan dan kemiringan tangga kurang dari 60 derajat, serta step block 5. Tidak ada tangga di lingkungan kantor karena tidak diperlukan	
A6	Ada tempat istirahat dengan bangku di area luar	1. Tersedia tempat istirahat dengan bangku di area luar lingkungan kantor	

No.	Fasilitas	Jawaban	Catatan
		2. Belum tersedia tempat istirahat dengan bangku di area luar lingkungan kantor	
A7	Area parkir khusus disabilitas tersedia <i>Kriteria:</i> <i>Dekat pintu masuk (≤ 60 m), memiliki lebar min. 370 cm dan ramp jika diperlukan</i>	1. Tersedia 2. Tidak tersedia → Lanjut ke pertanyaan B1	
A8	Jumlah lot parkir disabilitas adalah 2% dari jumlah total lot parkir	1. Jumlah lot parkir mencapai 2% dari total lot parkir 2. Jumlah lot parkir kurang dari 2% dari total lot parkir	

B. Pintu & Akses Masuk

No.	Fasilitas	Jawaban	Catatan
B1	Lebar pintu utama min. 90 cm	1. Lebar pintu utama mencapai 90cm 2. Lebar pintu utama kurang dari 90cm	
B2	Tidak ada ambang pintu masuk yang tinggi (≤ 1.25 cm) <i>Catatan: Ambang pintu adalah batas/tonjolan di bagian bawah pintu (sering berupa list kayu/metal) yang bisa menghalangi kursi roda, tongkat, atau alat bantu jalan.</i>	1. Tidak ada ambang pintu masuk yang tinggi 2. Ada ambang pintu masuk yang tinggi	
B3	Pegangan pintu masuk utama mudah dijangkau oleh pengguna kursi roda dan ringan untuk dibuka <u>Atau</u> Pintu masuk utama dapat dibuka/tutup secara otomatis	1. Ya 2. Tidak	

C. Akses dalam Gedung

No	Fasilitas	Jawaban	Catatan
C1	Tersedia lift dengan fitur aksesibel: <i>Panel tombol lift dalam jangkauan (90–120 cm dari lantai), ada huruf braille/angka timbul/fitur suara dan visual untuk menginformasikan posisi lantai. Ukuran bersih minimal ruang lift adalah 140 cm x 140 cm</i>	1. Tersedia lift dengan fitur aksesibel → C3 2. Tersedia lift, namun belum ada fitur aksesibel → C3 3. Lift tidak tersedia	
C2	Terdapat ramp antar lantai (jika tidak ada lift)	1. Ada ramp antar lantai untuk seluruh lantai 2. Ada ramp antar lantai untuk sebagian lantai 3. Belum ada ramp antar lantai	
C3	Tangga dengan handrail di kedua sisi dengan ketinggian 65 - 80 cm dari lantai, serta kemiringan tangga kurang dari 60°, dan step block dengan warna berbeda/kontras di setiap ujung anak tangga	1. Seluruh tangga sudah memenuhi standar tersebut 2. Sebagian besar tangga sudah memenuhi standar tersebut 3. Hanya sebagian kecil tangga sudah memenuhi standar tersebut 4. Belum ada tangga yang sudah memenuhi standar tersebut	
C4	Jalur dalam gedung cukup lebar untuk kursi roda (≥ 120 cm)	1. Semua jalur dalam gedung cukup lebar untuk kursi roda 2. Sebagian besar jalur dalam gedung cukup lebar untuk kursi roda 3. Hanya sebagian kecil jalur dalam gedung cukup lebar untuk kursi roda 4. Tidak ada jalur dalam gedung yang cukup lebar untuk kursi roda	
C5	Adanya guiding block ke ruang rapat utama	1. Ada guiding block 2. Tidak ada guiding block	

C6	Stiker/tempelan penunjuk arah yang kontras ke ruang rapat, toilet, mushola (penempatan stiker tidak lebih tinggi dari 160cm)	1. Ada penunjuk arah yang kontras untuk semua fasilitas umum (ruang rapat, toilet, musholla) 2. Ada penunjuk arah yang kontras untuk sebagian fasilitas umum 3. Tidak ada penunjuk arah untuk fasilitas umum	
C7	Pencahayaan dan ventilasi yang memadai <u>Pencahayaan yang memadai:</u> Tingkat cahaya di suatu ruangan atau area cukup untuk aktivitas yang dilakukan serta tidak menimbulkan silau atau bayangan berlebihan. <u>Ventilasi yang memadai:</u> Sirkulasi udara di ruangan cukup untuk menjaga kualitas udara, kenyamanan, dan kesehatan.	1. Pencahayaan dan ventilasi memadai untuk seluruh ruangan di dalam gedung 2. Pencahayaan dan ventilasi memadai untuk sebagian besar ruangan di dalam gedung 3. Pencahayaan dan ventilasi memadai untuk sebagian kecil ruangan di dalam gedung 4. Pencahayaan dan ventilasi tidak memadai	

D. Toilet Aksesibel

No.	Fasilitas	Jawaban	Catatan
D1	Tersedia toilet khusus disabilitas dengan kriteria sebagai berikut: - Ruang gerak kursi roda mencukupi (lebar ≥ 150cm) - Tersedia pegangan rambat yang kokoh - Ketinggian kloset 45–50 cm dari lantai dan wastafel terpasang pada ketinggian yang dapat dijangkau pengguna, termasuk pengguna kursi roda.	1. Ada di setiap lantai 2. Ada di sebagian lantai 3. Tidak ada toilet khusus disabilitas	

	- <i>Gagang keran air berbentuk tuas yang memudahkan orang dengan ragam kemampuan motorik.</i>		
D2	Tersedia tombol alarm darurat dalam toilet	1. Tersedia di seluruh toilet 2. Tersedia di sebagian besar toilet 3. Tersedia di sebagian kecil toilet 4. Tidak tersedia	
D3	Di toilet umum, tersedia urinoir aksesibel yang dipasang rendah, dilengkapi pegangan, dan rantai anti-slip.	1. Tersedia di seluruh toilet 2. Tersedia di sebagian besar toilet 3. Tersedia di sebagian kecil toilet 4. Tidak tersedia	

E. Fasilitas Pendukung

	Fasilitas	Jawaban	Catatan
E1	Adanya rambu dan marka aksesibel (ikon universal, braille pada papan informasi)	1. Ya, untuk seluruh marka 2. Ya, untuk sebagian besar marka 3. Ya, untuk sebagian kecil marka 4. Tidak ada	
E2	ASN memiliki akses meja kerja aksesibel. <i>Meja kerja mempunyai tinggi 70-80 cm atau bisa diatur ketinggiannya, ruang bawah meja cukup untuk kursi roda</i>	1. Ya, untuk seluruh ASN 2. Ya, untuk sebagian besar ASN 3. Ya, untuk sebagian kecil ASN 4. Tidak	
E3	Area layanan publik (loket, resepsionis, tempat beribadah) ada yang aksesibel <i>Definisi aksesibel dapat merujuk pada pertanyaan-pertanyaan sebelumnya (misal: Pintu dapat diakses pengguna kursi roda, ada ramp jika diperlukan, meja</i>	1. Ya, untuk seluruh layanan publik 2. Ya, untuk sebagian layanan publik 3. Tidak	

	<i>respsionis aksesibel, antrean khusus disabilitas, dll)</i>		
E4	Materi pekerjaan/komunikasi dapat diakses dalam format aksesibel (audio, easy-read, dll.)	1. Ya, untuk seluruh materi komunikasi 2. Ya, untuk sebagian besar materi komunikasi 3. Ya, untuk sebagian kecil materi komunikasi 4. Tidak ada yang aksesibel	
E5	Adanya sistem informasi suara & visual (TV text, light sign)	1. Ada 2. Tidak ada	

3. Dokumen Referensi & Bukti

Lampirkan:

- Foto-foto kondisi aktual
- Denah/blueprint bangunan (jika ada)
- Rencana renovasi atau pengadaan aksesibilitas
- Catatan atau rekomendasi internal
- Dokumentasi testimoni pengguna
